

Hand Held Highly Sensitive Metal Detector

OPERATING MANUAL

Schematic View

1. Detection Face

2. 3. 4. LED (Green for power, yellow for under-voltage and red for alarm)

5. Power Switch

6. Sensitivity adjuster

7. Handle

8. Battery Lid

9. Rechargeable Battery Socket 10. Hand off Switch (audio, light, vibration)

Applications:

1. Electronic detection inspection at airports , railway stations and wharfs;
2. Security inspection of customs, public securities , frontier defense and safeguard authorities;
3. Quality inspection of medicine and food commercial systems;
4. Security inspection of important sites and playgrounds ;
5. Noble metal detection , such as gold or silver jewelry manufact-uring plants.

Detection distance

- | | |
|----------------------|---------|
| 1. Pin | 30-60mm |
| 2. 64 model handgun | 150mm |
| 3. 6 inch long knife | 160mm |
| 4. Diameter | 20mm |
| 5. Steel ball | 90mm |

Features

1. Highly sensitive.
2. Simple and convenient to use , no adjustmenttis required;
3. The detection distance will not be changed when the battery voltage drops from 9V to about 7V;
4. Low power consumption , can work for 40 hours continysly;
5. There is automatic and continues alarm when the battery is used up;
6. Switch on/off audio prompt function;
7. Witch external rechargeable socket hole;

8. Has audio, light and vibration hand off switch.

Install and replace battery:

1. The battery lid can be opened by pushing backward with thumb at the concave groove.
2. Install the 6F22(9V) batttery according to the anode and cathode signs on the battery lid.
3. Cover with the battery lid and push forward firmly.

Method to use

1. Turn on the power switch (5), if a click sound is heard , it indi-cates that the power has been connected, and the green LED will turn on atthe same time . If the click sound is heard , it indicates that no battery has been installed or the battery is not well connected If the click sound is heard one after another , it indicates that the battery cannot be used any more and a new battery shall be installed.
2. When the switch-on click sound stops , the highly sensitivity detection can be performed . Grasp the handle and detect with the detection face around the object.

being detected . There will an alarm when a metal object is detected. In the mean time, the green LED will turn into red. When the detection stops, the alarm stops and the red LED turns into green.

Sensitivity Adjustment:

1. The sensitivity shall be adjusted when performance instability is observed or sound is produced when detecting human body without any metal stuff because the detection distance is loss than the stipulated requirement or the sensitivity is too high.
2. Insert a small straight-shaped screwdriver into the small hold of the handle of the detector and rotate clockwise barely to the position where no sound is produced, then rotate for another half a circle, until the sensitivity meets the requirement.

NOTE

1. Be sure to switch off the power after use.
2. Battery shall be taken out when the detector will be kept unused for long.
3. No sound will be produced when the probe is fixedly positioned to the metal object . Sound is produced only when the probe crosses the metal object.
4. Be sure to switch off the power (5) when the battery is recharged.
5. Charger voltage: 9Vfor AC; 10V for DC. (The charger shall beself-provided)
