#### 1 Set up your router

Most of the time, if you set up the router correctly, there will have no issue to access internet. We sugget you setting up the router according to parameters below when you use M8.

1 Recommended parameters for your router

SSID: Name your router

(better to be English letters or Arabic numerals)

PPPoE: Auto connection Security Mode: WPA-PSK/WPA2-PSK or WPA2-PSK

Open SSID broadcasting: In order to make other devices to find your router Password: 8 Abric numberals or English letters

WiFi Standards: 802.11n or 11b/g

Channel: Auto, 3 or11

Open DHCP: For router to dispatch IP dynamicly

## Access to your router on website

Firstly, find the IP, Account, Password of your router as picture showed on the right...

Tplink Router: Default IP: http://192.168.1.1

Account: admin Password: admin Netgear Router: Default IP: http://www.routerlogin.net

Account : admin Password : password

Netcore Router Default IP: http://192.168.1.1

Account : guest Password : guest

For example (Netgear router): Connect your router with LAN cable and get the default IP, type in "http://www. routerlogin.net" in the web browser (IE, Chrome or others) on your PC/Notebook. Type in account and password in the pop-up menu to open the setting menu of your router. As pictures showed below:

1 Change security mode and password for you route

In the setting menu of your router, click Wireless Setting>Wireless Secutiry Setting> to choose WPA-PSK/WPA2-PSK,set a password with 8 Arabic numberals or English letters , and click Save. As picture showed below:

Notice: We strongly recommend you to choose Security mode of WPA-PSK/WPA2-PSK

# 2 Connect to Internet

#### WiFi

in the home menu, go to Network and choose your rotuer available. Type in password and click Connect.It will show as Connected as picture below:

#### Enthernet

Go to System Setting in the home menu,go to choose LAN in the Network menu after you plug in LAN cable.

Notice: When you plug in LAN cable, the system will default on Enthernet connect; when no LAN cable plug in, the system will default on WiFi. LAN and WiFi can not be available in the same time.
