How to download Fundo

How to get the Fundo APK for iPhone and Android users

Way1 for both Android and iPhone users: Scan the QR code on watch or user manual through smart phone or QQ sweeping function to download and install on phones:

Tips:

WeChat only supports QR code scanner to read, doesn't support downloading. Please make sure your phone have enough memory space and the operating system version is supported.

Android

Google Play

FundoWear

app store

FundoWear

Way 2 Android users:

1. After installing Fundo Wear, enter into mobile phone setting-Bluetooth-open (Android devices should be visible, and iPhone should open location services (setting-privacy-location services-on)

2. Open Fundo Wear after completing the phone settings, login screen will pop up, and you can register by email, or login by QQ/WeChat account.

3. Enter into the Fundo interface, and click "+" at the right bottom corner, then Bluetooth icon will appear. Click it to search. When you find the watch, click the watch name to connect, then a pairing message will appear, and choose "Pair". When Fundo connection is successful, Android users can use all the functions on Zeblaze smart watch.

4. For iPhone users, after installing and connecting with the Fundo Wear successfully, enter into phone settings-Bluetooth, search the watch and connect, and pairing message will come out, then choose "pair", then you can use all the functions on watch.

Tips:

For iPhone Users, when Fundo occurs flash back, please make sure your location services is on.
Please make sure your Fundo is registered successfully, otherwise data cannot be synchronized between iPhone and the watch.
If another device is connected to your phone accidentally, there will be no message prompts during Bluetooth connection. Please go to the settings about on watch, and check if the Bluetooth device address is the same as your connected device. If not, please choose the right one for Bluetooth connection.
