

Establishment of the disk partition and formatting

### 3. Encrypt hard drive operation

#### Unite Hard disk:

connects to the USB line with the computer, an external drive box RFID will be issued a short sound and shine red light, it shows that system has been activated into the encryption mode and wait for induction. Using one of a

induction card of previous process and close to induce successfully. If hear short sound "di" twice, and a red light turn to green light. After computer identify this hard drive installation and then can be used. If hear long sound

"di" once, it represents induction is wrong, you may get the wrong induction card. Please take other induction cards to re-induction.

#### Close Hard disk:

In the state of hard drive is not reading and writing, please use "remove disk safely" and quit the hard drive, or use the correct induction card and induce again. Then it can close and lock the hard drive.

### 4. Restore and encrypt hard drive operation

#### Restore hard drives:

Please backup your data, and then connect hard drive to other traditional external box, and connect to the USB line with the computer, when the computer identify this hard drive device, go to "My Computer" under right key "disk Management" in the "Management", select hard drive, establish hard disk initialization information, and then establish your required partition and format it.
