#### FAQ:

1. If power cable (USB cable) already connected, but LED indicator is still OFF, please check the power adaptor; if use the TV's USB port to supply the power, please change to power adaptor.

2. If LED indicator is ON, but there is no HDMI output, please check if the HDMI cable connect properly, and check if the TV's video source has been switch to HDMI

3. If USB mouse has been connect to Android HDMI stick, but there is no mouse cursor, please check if the mouse connected properly, and if a battery needed for 2.4G wireless mouse. (There is very few kinds of mouse don't work with Android HDMI stick)

4. If the Wi-Fi network has been setup, but Android HDMI stick doesn't access the internet, please check if the Wi-Fi icon is gray color, which means the Wi-Fi signal is weak, please consider to adjust the Wi-Fi equipment or find your network technical support

5. If there is no 'Soft Keyboard' when click a place to input, please find the small 'keyboard' icon in the bottom right corner, and select the switch off the physical keyboard.

6. Some applications are designed for mobile phone, which has the difference resolution from Android HDMI stick's HDMI (1920x1080), they don't work full screen in TV.

7. If some application don't work on Android HDMI stick, they are not optimized on Android 4.0
