Chapter 2   Basic Operations

I.   Charging Method and Battery Management

Please make sure the battery has been fully charged before using your device. The battery will reach the best condition after fully charging/discharging for two or three times.

Charge the battery: connect one end of the charger to this device and the other end to power supply.

II.   Turning Your Device On and Off

1. **Turn on your device:** long press power button until startup interface appears. It might take few seconds due to initialization.

2. **Turn off your device:** long press power button until the dialogue appears. Click "turn off".

Note: In case your device is turned off by force, it will scan and repair the disk after rebooting, which may take few minutes.

III.   Standby and Unlocking Your Device

1. **Standby:** your device will go into standby status in case of no operation within a certain period of time, which can be preset by the user. The touch screen is locked in standby status.

2. **Lock your device:** press power button so that your device will go into standby status to avoid unintended operation and save power.

3. **Unlock your device:** in standby status, press power button to unlock your device. Tap and hold icon ▣ and drag the light ring to 🔒 so that the screen is unlocked.

IV.   Reset

In case your device crashes or fails to start up due to improper operation or other reasons, press reset button to reboot your device.

V.   Icons and Operating Instructions

There are five home screens as default. You may slide left or right to switch among home screens.

1.   Icons

■: Google search. ■: voice search.

■: view applications or widgets.

■: back to previous interface. ■: back to home screen.

■: view recently used applications. ■: set current interface.

2.   Customize Home Screens

Delete a shortcut icon: tap and hold a shortcut icon until it wiggles. Drag it to "X" to delete it.

Add icons: on the home screen, click ■ to view all applications and widgets. Tap and hold an application or widget, and it will be added on home screen. You may drag it to anywhere on the home screen.

Create a folder: on the home screen, tap and hold an application, and then drag it to overlap another one to create a folder.

Change wallpaper: tap and hold blank area on home screen→ select wallpaper source, and then set a picture as wallpaper.

3.   Notification Center

You may view new messages or system status (such as USB connection, memory card inserted, etc.) at notification center.

Notification center: there is a status bar on the top of the screen, and notification icon appears on the left side of status bar. Pull down notification bar to view notifications.

Quick setting shortcuts: commonly used shortcuts for quick setting can be found

---

at notification center. Pull down notification bar to view quick setting shortcuts.

Turn off notification center: slide upward or click ■ to turn off notification center.

VI.   Screen Shot

You may take screen shots according to the following procedures.

1) Turn on your device and go into the interface where you would like to take screen shots. Press "volume –" and "power" button at the same time to take screen shots.

2) At notification center, click ■→ "screen shots" to view them.

VII.   Input Methods

1. Tap input field and edit menu pops up.

2. Pull down notification bar→ click keypad icon on status bar and select input method. You may click again to change input method.

Note: You may preset desired input methods by clicking "settings"→ "languages and input methods" and tick options of input methods.

VIII.   SD Card

You may install SD card to save data. Please install SD card according to standard procedures.
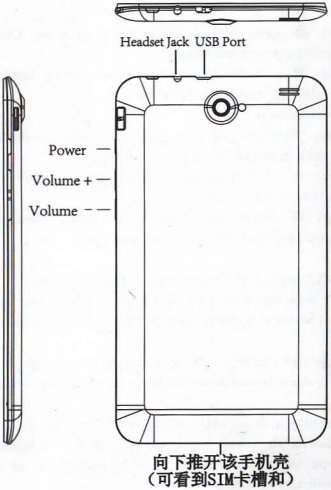

Tips

1. Please do not hot plug SD card to avoid loss of important data.

2. Please select FAT32 when formatting memory card on PC.

Uninstall SD card:

Click ■ on home screen→ settings→ storage, select "uninstall SD card".

Please slightly press card tray so that it pops up. Take SD card out of the tray.

IX.   PC Connections

You may connect your device to PC via USB cable.

1. Connect one end of USB cable came with this device to this device, and connect the other end to PC. When "USB connected" appears on screen, click "open USB storage device" on PC to access files saved on your device.

2. Please do not change the name of any sub-directories, otherwise, it might cause failure to access files.

3. Please make sure your device has enough power when connecting to PC, otherwise, your device cannot be found on PC.

Note: 1) When connecting to PC, please make sure USB debugging function is disenabled, otherwise, it might cause failure to access files.

2) Before plugging USB cable out of PC, please make sure they have been disconnected.

Chapter 3   Basic Settings

Click ■ on home screen→ settings, and there are many options, such as wireless and network, device, user, account and system.

I.   Wireless and Network

Include: SIM card management, WLAN, Bluetooth, data usage, etc.

1.   WLAN

Wi-Fi connection: you may use your device's wireless networking capabilities to connect to any wireless local area network for browsing web or downloading data.

1) Click "Wi-Fi" and slide the bar to enable Wi-Fi so that available wireless networks will be listed out.

Page 7

2) Select one of them for connection. For encrypted network, password is required.

Tips

1) Click ▣ →press Wi-Fi protection button on router. Click "+" to manually add a wireless network.

2) Click ▣ → "scan" to search available wireless network. Click ▣→advanced to set wireless networks.

2. Bluetooth connection

1) Click "Bluetooth" and slide the bar to enable Bluetooth so that available Bluetooth devices will be listed out.

2) Select one of them for pairing. Conformation from the other party might be required to complete pairing.

3) Click ▣ →rename your device, check timeout setting, view files received and check Bluetooth advanced settings.

Tips

1) Click "search" to start search available Bluetooth devices.

2) The connecting method provided herein is for reference only, which shall be subject to change due to different model of Bluetooth device.

3. Mobile network connection: this device has 3G module built in; therefore, the user is able to browse the web wherever and whenever possible.

1) Turn off your device and install 3G card of China Unicom.

2) Select mobile network setting and manually turn on built-in module power and data transmission. When 3G icon appears on status bar, mobile network is connected.

Tips: Wi-Fi and mobile network should be used alternately.

Page 8

II.   Device
