## V. Problems and solutions

## VI. Daily maintenance
I. FOREWORD

Thank you for purchasing and using character LCD touch screen wireless smart alarm system. This is a high performance intrusion alarm system, which can provide you with safer environment and better family protection.

In order to use this alarm system properly and efficiently, please read the following information before use.

II. SYSTEM CONFIGURATION AND FEATURES

★ SYSTEM CONFIGURATION

System components: (Basically includes alarm host and optional accessories)

<table>
<thead>
<tr>
<th>alarm host</th>
<th>original packaged accessories</th>
<th>optional accessories</th>
</tr>
</thead>
<tbody>
<tr>
<td>character LCD screen alarm host</td>
<td>wireless remote controller x2pc, wireless door sensor x1pc, wireless wide angle PIR sensor x1pc, wireless indoor siren x1pc, installation trestle x1kit, adapter x1pc, user manual x1pc</td>
<td>wireless smart door/window sensor, wireless smart PIR sensor, wireless/wired gas detector, wireless/wired smoke detector, wireless operation keypad, wireless/wired outdoor siren, doorbell button, etc</td>
</tr>
</tbody>
</table>

★ FEATURES

- Host is compatible with Contact ID protocol, suitable to build CMS (Central Monitoring Station);
- Touch button keypad, date, day of a week, time, system status and corresponding zone number and sensor name will be displayed on LCD screen;
- Multi-languages: simplified Chinese \ English \ German \ French \ Hebrew, etc., to meet different market requirements;
- 31 wireless zones (each zone supports max 4 wireless sensors, 2 dedicated zones were preset for wireless remote controllers or wireless operation keypad), 8 wired zones is optional;
- In system can preset max 5 groups phone numbers, alarm call will be in first priority;
- Learn sensors into alarm host by easy operation;
- System has non-volatile chip, information will be stored automatically if power is off;
- Optional smart function, check door \ window status or voltage status automatically, low voltage of host or sensor will alarm, upload low voltage status to CMS;
- Support optional wireless “ding-dong” doorbell function;
- System works with AC \ DC power supply, with Low-voltage Indicators, System has built-in rechargeable lithium battery, it will alarm when low power happens or external power supply is cut;
- Store max 100 alarm records and 100 arm \ disarm records
- Dual network or GSM network alarm host can send alarm info by SMS or PHONE CALL;
- PSTN network alarm host can send alarm info by PHONE CALL;
- Dual network or GSM alarm host can arm/disarm system by PHONE CALL, or SMS, or WIRELESS REMOTE CONTROLLER, or HOST KEYPAD, or WIRELESS REMOTE PANEL;
- PSTN alarm host can arm/disarm system by PHONE CALL, or WIRELESS REMOTE CONTROLLER, or HOST KEYPAD, or WIRELESS REMOTE PANEL;
III. SYSTEM INTRODUCTION

* DRAFT OF ALARM SYSTEM

- 2) GSM network host's back

- 3) Dual-network host's back

*Draft of alarm host (Hosts with different networks have same front panel)

*(Hosts with different networks have different back view)
**SPECIFICATIONS**

- **Power supply:** 100-240V, 12VDC, 1A;
- **Static current:** <50mA; **Alarm current:** <500mA;
- **Standby time:** around 16 hours;
- **Full charging time:** 12 hours;
- **Working condition:** Temperature -10°C ~ 50°C; Humidity <80%.

- **Support max 8 remote controllers, and max 116pcs wireless sensors, like door/window sensor, PIR sensor, and wireless gas detector;
- **System wireless frequency:** 433.92MHz or 868.35MHz;
- **3 Bonds or 4 Bonds is optional for GSM host or dual-network host;
- **System has rechargeable built-in lithium battery:** 3.7V800mAh;
- **Product dimension:** 168mm*112mm*26mm

**ZONE TYPE DEFINITION**

- **Zone types:** Perimeter zone, Motion zone, Emergency zone
- **Definitions:**
  1. **Perimeter zone:** It is a detecting area, through which the intruder will pass (like the door, or window), usually in this area wireless door/window sensor, wireless PIR curtain detector are installed.
  2. **Motion zone:** It is a detecting area, through which the intruder will enter (like living room, aisles and bedrooms, etc.), usually here wireless infrared wide-angle detectors is installed.
  3. **Emergency zone:** Usually means the space like the emergency area (such as SOS, medical rescue, gas leakage and fire alarm, etc. This zone is kept in arming status for 24H automatically. Generally set panic button, wireless gas sensor, wireless smoke sensor.

**ARM MODE INTRODUCTION**

- **Arm mode:** Arm Away, Arm Home
- **Definition of Arm mode:**
  1. **“Arm Away” mode:** This mode is set when nobody is home, if any detectors in perimeter zones and motion zones get triggered, the host will alarm immediately and dial “Panic” automatically at the same time.
  2. **“Arm Home” mode:** This mode is set when family member is home, if any detectors in perimeter zones get triggered, the host will alarm immediately and dial “Panic” automatically. It will not alarm if any detectors in the motion zone are triggered now.

**HOW TO OPERATE THE ALARM HOST**

- **PREPARATION BEFORE USE**
  - Do this progress 1 and 2 when system in power off status;
    1. Insert SIM cord properly (For GSM host and dual-network host);
    2. Connect the telephone cable (For PSTN host and dual-network host);
    3. Connect power supply;
    4. Switch the side button on the panel to position “ON” to turn on the backup battery;
    5. Check the GSM signal is OK or not
- **HOW TO CHECK SIGNAL STATUS**
  1. In standby screen, press “↑” or “↓”, you will see draft as below.
     1. If the SIM card is well installed, you will see: Signal Level XX YY. XX are digits from 0-31, means the signal status. The larger the digit is, the stronger the signal will be:

**ARM MODE INTRODUCTION**

- **Arm mode:** Arm Away, Arm Home
- **Definition of Arm mode:**
  1. “Arm Away” mode: This mode is set when nobody is home, if any detectors in perimeter zones and motion zones get triggered, the host will alarm immediately and dial “Panic” automatically at the same time.
  2. “Arm Home” mode: This mode is set when family member is home, if any detectors in perimeter zones get triggered, the host will alarm immediately and dial “Panic” automatically. It will not alarm if any detectors in the motion zone are triggered now.

**HOW TO OPERATE THE ALARM HOST**

- **PREPARATION BEFORE USE**
  - Do this progress 1 and 2 when system in power off status;
    1. Insert SIM cord properly (For GSM host and dual-network host);
    2. Connect the telephone cable (For PSTN host and dual-network host);
    3. Connect power supply;
    4. Switch the side button on the panel to position “ON” to turn on the backup battery;
    5. Check the GSM signal is OK or not
- **HOW TO CHECK SIGNAL STATUS**
  1. In standby screen, press “↑” or “↓”, you will see draft as below.
     1. If the SIM card is well installed, you will see: Signal Level XX YY. XX are digits from 0-31, means the signal status. The larger the digit is, the stronger the signal will be:
If the SIM card is not well installed or installed, you will see:

NO SIM CARD: XX YY. It means no SIM card is detected or it is not well install, system in no signal status; YY stands for signal status, OK is good. No is weak (you need to adjust host's installation position or reinsert the SIM card).

2. You can also check the signal status by checking LED indication:

<table>
<thead>
<tr>
<th>Type</th>
<th>Frequency range</th>
<th>GSM Signal OK</th>
<th>Signal is bad or SIM card is not installed well</th>
</tr>
</thead>
<tbody>
<tr>
<td>3-Band</td>
<td>(900/1800/1900 MHz)</td>
<td>Indicator flashes every 2 seconds</td>
<td>Indicator flashes every 3 seconds</td>
</tr>
<tr>
<td>4-Band</td>
<td>(850/900/1800/900 MHz)</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

3. Press "ESC" to get back to standby screen. Or get back to standby screen automatically after 30 seconds without any operation.

- **HOW TO PROGRAM**

  **NOTE:**
  "The host will get back to standby screen if no any operation is processing within 30 seconds"
  "If will get back to the previous menu if you press "ESC";"
  "If you type in the codes by mistake for 3 times, the host will get back to the standby mode;"
  "You can press "↑↓" to check programming menu in programming mode, or to check alarm info records in standby screen.

### A. Programming menu preview

<table>

### B. Detailed programming instructions:

- **How to get into the programming menu in standby screen:**
  - Operate as [SET+programming code+ENT+press] to delete the existing digits
  - (Note: default programming code is 888888, 6 digits)
  - **NOTE:** If enlist the user code 3 times by mistake, the host will get back to the standby screen automatically.

1. **How to \[SET time\]:**
   - In standby screen, operate as [SET+programming code+ENT+press] to delete the existing digits
   - (Note: "xxxxxx", 6 digits, means "hour, minute, second", each of them takes 2 digits space. E.g.: you may press 142120, the host time will be 14:21:20.
   - **NOTE:** *xxxxxx", 6 digits, means "year, month, day and week". E.g.: if you enlist 0701174, means Jan 17th, 2007. Thursday. (Last digit can be from 0 to 7, means from Sunday to Saturday.)

2. **How to \[Set Date\]:**
   - In standby screen, operate as [SET+programming code+ENT+press] to go to "Set Date +ENT+press" to delete existing digits
   - (Note: "xxxxxx", 7 digits, means "year, month, day and week"). E.g.: if you enlist 0701174, means Jan 17th, 2007. Thursday. (Last digit can be from 0 to 7, means from Sunday to Saturday.)

3. **How to set \[Auto Dialer\]’ \(S\):**
   - In standby screen, operate as [SET+programming code+ENT+press] to go to "Auto Dialer’s+ENT+press" to delete existing digits
   - (Note: totally 5 group’s telephone/mobile numbers:
     - The first group is set for management center; other 4 groups are ready for personal numbers;
     - Alarm information reporting method: send the alarm info by SMS to enlisted mobile phone (GSM host and Dual-network host), or send alarm info by making a call to the enlisted phone

- **NOTE:**
4. How to set [Entry delay]:
   In standby screen, operate as [SET+programming code+ENT+press to go to Entry Delay]
   press--to delete existing digits xx, enlist new digits xx + ENT]
   * "xx", 2 digits, from 00-59, default digit "00": E.g. if here you enlist 15, it means the indoor siren will start alarm in 15 seconds;

5. How to set [Exit delay]:
   In standby screen, operate as [SET+programming code+ENT+press I to go to Exit Delay]
   press--to delete existing digits xx, enlist new digits xx + ENT]
   * "xx", 2 digits, from 00-59, default digit "00": E.g. if here you enlist 15, it means the indoor siren will start alarm in 15 seconds;

* Digit from 00 to 60 minutes, the default is 03 <min>.
* This setting is to set the alarming time of siren for each sensor in different zones. If you set 1 min for the sensors in Emergency Zone, the siren will alarm for 1 min once the sensor in the Emergency Zone is triggered....

7. How to set [Arm/Disarm Beep]:
   In standby screen, operate as [SET+programming code+ENT+press I to go to Arm/Disarm Beep]
   press--to choose YES or NO + ENT.
* The default setting is "YES".
* You choose YES, the system will give DI notification when it is armed/disarmed; if you choose NO, system will give no DI notification when it is armed/disarmed;

8. How to set [User ID]:
   In standby screen, operate as [SET+programming code+ENT+press I to go to User ID + press-- to cancel existing digits xxxx, enlist new User ID 4 digits + ENT;]
   *Digits from 0000 to 9999, default ID setting is randomly
   * If you choose YES, system will upload Arm/Disarm information to the Central Monitoring Station. If you choose NO, system won't upload. The default setting is "NO".

9. How to set [Upload status]:
   In standby screen, operate as [SET+programming code+ENT+press I to go to Upload status + press--to choose YES or NO + ENT;]
   *This is to control whether the system will upload Arm/Disarm/Alarm information to the Central Monitoring Station. If you choose YES, system will upload; if you choose NO, system won't upload. The default setting is "NO".

10. How to set [Cut Wire Alarm]:
    In standby screen, operate as [SET+programming code+ENT+press I to go to Cut Wire Alarm + press--to choose YES or NO + ENT;]
    *This function is for PSTN network host and dual-network host to detect the landline cable's connecting status;
    *If the system is connected or disconnected, it will give no notification if you choose YES, system will alarm when the landline cable is
disconnected; if you choose NO, system won’t alarm when the landline cable is disconnected.

*The default setting is “YES”*

11. How to set “Zone Attribute”:
In standby screen, operate as [SET] → programming code → ENT → press 1 to go to Zone Attribute + ENT + press → to delete existing 2 digits xx, enlist new 2 digits xx + ENT + press → to choose 0/1/2 + ENT + press → to delete existing 2 digits xx, enlist new 2 digits xx + ENT + press → choose YES or NO to set Bypass Zone + ENT + press → choose YES or NO to set Enter Delay.

Set + ENT, now the change for this zone is finished.

*This is to change the zone and sensor properties, including changes to Zone Number, Zone Type, Sensor Type, Bypass Zone and Entry Delay Setting:*

### 【Zone number】:

1. System has 39 zones, 31 wireless zones and optional 8 wired zones;
2. Among the 31 wireless zones, there are 2 dedicated zones for wireless remote controllers/operation keypads; 29 wireless functional zones;
3. Each wireless zone supports max 4 wireless sensors, each wired zone support one wired sensor;
4. “Zone Type”, “Alarm Type”, “Bypass Zone” and “Entry Delay” can be preset for each zone individually;
5. Table 3: “How to match Zone No. with Sensor Type and according Zone Type”

### Table 3: “How to match Zone No. with Sensor Type and according Zone Type”

<table>
<thead>
<tr>
<th>Zone Number</th>
<th>Sensor Type</th>
<th>Zone Type</th>

</tbody>
</table>

### 【Zone Type】:

1. You will see “2”, “1” and “0” in Zone Type setting.
2. “2” means motion zone, “1” means perimeter zone, “0” means emergency zone.
3. Press t to choose the zone type, into which you desire to put the zone number, then press ENT to confirm your settings.

### 【Alarm Type】:

1. Alarm Type means sensor type, it is to define which code stands for what the sensor is;
2. Sensor code is 2 digits, which stands for corresponding sensor type, please check the below table 4 for Sensor Name VS Original Codes of them:

#### NOTE:

*Above “Alarm Type” means sensor type, there are 2 digits, and customer had better not make changes in system.*

Table 5: Default set of Zone Number VS Sensor Name before shipment

* Wireless sensors
* Wireless remote sensor
* Wireless door sensor
* Wireless wide-angle PIR sensor
* Wireless gas sensor
* Wireless smoke sensor

Zone Number: 00

00 11 21 02 03

1. *If you choose YES to enable the Entry Delay function here, previous time setting in main menu [Entry delay] will be valid; If you choose NO to disable the Entry Delay function, previous time setting in main menu [Entry delay] will be invalid:

12. How to set [Set Smart Zone]

In standby screen, operate as [SET + programming code + ENT + press + to go to Set Smart Zone + ENT + press + to delete existing 2 digits xx, enlist new 2 digits xx + ENT + press + choose YES or NO to choose to enable the Smart Sensor function in this zone or not + ENT + press + to choose the Door/Window Status should be open or close in Arm Away Status + ENT + press + to choose the Zone Indicator will notify or not + ENT to go to setting menu of next zone No.:

1. This is to choose whether you would like to enable the smart function of sensors in assigned zone;
2. The smart zone will be enabled only when smart sensors are learned into this zone, and the smart functions of smart sensors are enabled;
3. [Zone Number]:

1. Here you will enlist the zone No., 2 digits from 02-38, which you decide to set as a smart zone;
2. You need delete the existing 2 digits firstly, and then enlist the new zone No.
3. For details of “How to match Zone No with Sensor Type and according Zone Type”, please check the Table 3;

* [Smart Sensor ON]:

1. Here you will choose YES or NO by pressing + to decide whether you will enable the smart function in previous enlisted Zone No.;
2. Default setting is NO;
3. If you choose YES, the smart functions of smart sensors will be valid in this zone; if you choose NO, the rest smart function setting will be invalid, like sensor’s low voltage alarm function, upload low voltage to CMS...
【Seven Indicators】
1. This is to set whether there will be notification melody if this zone is triggered;
2. If you choose "YES", means the notification will be enabled; NO means the notification will be disabled;
3. Default setting is NO;
13. How to set 【Program Sensor】
In standby screen, operate as 【SET+programming code+ENT+press 1】 to go to Program Sensor + ENT + press -- to delete existing 2 digits xx, enlist new 2 digits xx as zone No. + ENT + press -- to delete existing digit x, enlist one new digit x as new group No. + ENT + press to choose ActivateSensor or DeleteSensor + ENT + press -- to get back to the menu
【Program Sensor】 to start another sensor learning progress;
*The settings in this menu here is to enhance the system function to realize intrusion alarm by PIR sensor or door sensor, smoke detection by smoke detector, gas detection by gas sensor, sending alarm sound by indoor/outdoor siren by adding or deleting sensors into/from the system;
*The progress of adding a sensor into the system is called "Learning", deleting a sensor from the system is called "Deleting";
*Our system is compatible with wireless detectors or wired detectors, wireless frequency is optional 433.92MHz or 868.35MHz;
*mentioned Zones include zones for wireless sensors, and zones for wired sensor. Zone number above is optional from 00~38, totally 39 zones; Each wireless zone can hold 4 wireless sensors, each wired zone can only hold 1 wired sensor; Refer to Table 3 for zone detail;
*Mentioned Group number is optional from 0 to 3, totally 4 groups; each sensor occupies one group;
*When you start every learning progress for a zone, you need clear the existing zone No. firstly by pressing "-, then start the learning progress;
Please check this sample progress if I want to learn a door sensor into the zone 11, group 0 of alarm system:
*Bring a door sensor next to the alarm host;
*In the standby screen, operate as 【SET+programming code+ENT+press 1】 to go to Program Sensor + ENT + press -- to delete existing 2 digits xx, enlist new 2 digits xx as zone No. + ENT + press -- to delete existing digit x, enlist one new digit 0 as new group No. + ENT + press 1 to choose Activate Sensor + ENT + press to separate the 2 parts of the door sensor immediately, repeat this progress 2 or 3 times.
*If you find a "Success" on the screen, that means the door sensor is learned into the system successfully; if it shows "Failed", means this learning progress failed;
Note: If a word "update?" appears when you are learning a sensor into the alarm host, it means in this zone there is a existed sensor; If now you choose YES by 1, the existed sensor will be replaced; if you choose NO 1, the learning progress will be stopped;
Please check this sample progress if I want to delete a PIR sensor in zone 21, group 0 from the alarm system:
*Bring a PIR sensor next to the alarm host, turn on the battery;
*In the standby screen, operate as 【SET+programming code+ENT+press 1】 to go to Program Sensor + ENT + press -- to delete existing 2 digits xx, enlist new 2 digits xx as zone No. + ENT + press -- to delete existing digit x, enlist one new digit 0 as new group No. + ENT + press 1 to choose Delete Sensor + ENT + press to trigger the PIR sensor 2-3 times immediately.
*If you find a "Deleting Success" on the screen, that means the PIR sensor was deleted from the system successfully; Usually, no fail operation will be shown here;
14. How to set 【Wireless Code】
In standby screen, operate as 【SET+programming code+ENT+press 1】 to go to Wireless Code + ENT + press -- to delete existing 5 digits xxxx, enlist new 5 digits xxxx as new code + ENT to confirm this progress;
* Digits from 00000 to 99999 for wireless address code setting;
* Default code is random;
15. How to set [Alarm History]
In standby screen, operate as [SET+programming code+ENT+*]* to go to Alarm History+ENT to check the alarm history by pressing 1;
16. How to set [Status History]
In standby screen, operate as [SET+programming code+ENT+*]* to go to Status History+ENT to check the alarm history by pressing 1;
Note: Press Disarm Button on the front panel to exit from the programming status after finishing each setting.

• HOW TO REVISE USER CODE
This setting is to change the “User Code” of the host. (Default code is "888888")
* [ENT+999999+ENT+new user code+ENT+new user code+ENT], now the host will get back to the standby screen after successful change.

• IMPORTANT SYSTEM OPERATION
1. Record
Keep pressing “record button” on the back of the alarm host, speak to the speaker, then release, the voice will be recorded.
2. Play
Keep pressing the “play button” on the back of the alarm host, you will hear the previously recorded voice.
3. Arm system
* By wireless remote controller: press the arm button on the wireless remote controller, the host will beep DIDI to confirm your successful arm operation
* By host keypad: [0+user code+ENT+”↑↓”+ENT], press “↑” to choose “armed home” or “armed away”, then press ENT to confirm your choice;
NOTE:
① Arm away is usually used when nobody will stay in the monitored space; System will alarm if any sensor triggered;
② Arm home is usually used when somebody still stay in the monitored space; System will alarm if only sensor is triggered in Perimeter Zone;
* By SMS: Edit SMS text “user code + 1” (if the user code is 666666, then you edit 6666661) in your mobile phone and send it to the phone number, which was enlisted in the host SIM card. The host will arm automatically if the SMS is received, and send a reply “Arm successfully” at the same time. The SMS way can only be used for arm away mode of system. <This SMS arm way is ready for GSM network alarm host and dual-network alarm host>
* By phone call: make a call to the phone number, which was enlisted in host SIM card; about 30s later type in the user code and number 1 after hearing a DI; system will arm after you type in the 1, this means system is armed successfully; The phone call way can only be used for arm away mode of system. <Phone call arm way is ready for all network alarm hosts>
4. Disarm system
* By wireless remote controller: press the disarm button on the wireless remote controller, the host will beep DIDI to confirm your successful disarm operation
* By host keypad: [Pressing disarm button+user code+ENT], the host will beep DIDI to confirm your successful disarm operation;
* By SMS: Edit SMS text “user code+0” (if the user code is 666666, then you edit 6666660) in your mobile phone and send it to the phone number, which was enlisted in the host SIM card. The host will arm automatically if the SMS is received, and send a reply “Disarm successfully” at the same time; <This SMS arm way is ready for GSM network alarm host and dual-network alarm host>
* By phone call: make a call to the phone number, which was enlisted in host SIM card; about 30s later type in the user code and number 0 after hearing a DI; system will disarm after you type in the 0, this means system is disarmed successfully; <This phone call arm way is ready for all network alarm hosts>
5. Emergency help
* By wireless remote controller: press Emergency button on the wireless remote controller, the host will alarm right now, and send you the alarm info by SMS or phone call;
* By host keypad: press ";', the host will alarm immediately, and send you the alarm info by SMS or phone call;
6. What can you do when you get an alarm phone call?
After receiving the alarm call, you will hear the recorded voice message immediately, it will be played for 30 seconds repeatedly, you can make the following operations:
* Input number “8” to enter into the 20s monitoring status automatically, you will hear it anybody talks in the monitored space;
* Input “*” to repeat the recorded audio; (this function is good at CMS appliance, because the staff in CMS can get your recorded message repeatedly, like “Hi, CMS, this is Tina in Building A, Floor 21th, Room 2112, please help me”. If the first time the CMS man does not get your position clearly, the second or third time he can get your location info clearly;
* Input “#” to cancel alarm phone call finally from the host, the host wonˈt send alarm info any more on this urgent situation.
* Hang off the alarm telephone, the host number will dial next group auto dialer.
7. What you will get if you set your alarm host sends the alarm info by SMS?
The cell phone number will get a SMS like “alarm systerm xx zone xxxx alarming”, xx stands for the zone number, xxxx stands for the sensor name;
8. Remote listening
Make a call to the alarm number, input user code when you hear a DI, now type in number “8” to enter into the 20S Listening Status. Putin again the “8”, the host will get into another 20S Listening Status before the first 20S Listening Status reaches final.
9. Browse alarm records
In standby screen, operate as 【SET+programming code+ENT+press t to go to Status History + ENT to browse the working records】
*Max 100 records will be recorded here;
*If the 101th record comes, the first one will be covered;
10. Browse Status History
In standby screen, operate as 【SET+programming code+ENT+press t to go to Status History + ENT to browse the working records】
*Max 100 records will be recorded here;
*If the 101th record comes, the first one will be covered;
11. Door/Window status monitoring
* This is a smart sensor function, this function will be valid when smart sensor is installed in the smart zone and the smart zone is in ON status;
* This function is to make sure that all the door/window sensors are in close status < default status of the door/window sensor> when you do the arm operation to the system. If any door/window sensor is open, the host will beep DIDIDIDI when you make the arm operation and show the following draft “XX”: zone number
“YYYY”: sensor name
Note:
1. This is a smart sensor function;
2. If you want to arm system by SMS or phone call, the operation is same to original.
3. If you want to arm system by remote controller or wireless keypad in sensor open status, two times arm operation will ignore the sensor open status.
12. Wireless “dingdong” doorbell function
* The alarm host will sound “dingdong” two times after you press doorbell button;
* This is an optional function, to be realized by wireless doorbell button;
F. ATTENTION IN OPERATION

* About Alarm call:
  ★ In Auto Dialer®’s setting, choose “SMS Reporting” to send alarm info will be only valid for the GSM network alarm host and dual-network alarm host; Choose “Call by phone” will be valid for all network alarm hosts.
  ① If the alarm info transferring way is by phone call - when the alarm system is triggered, the host will make the calls to the enlisted phone numbers from the first group to the fifth group number, if the enlisted phone number is empty, this number will be ignored;
  ② Every enlisted number will get the alarm call 3 times repeatedly to deal this alarm status, if you do not shut down the alarm call rightly by pressing #, the alarm host will keep calling repeatedly 3 times until you deal any one call of the three calls rightly;
  * About Arm Delay notification:
    ① The host will beep DI every second in Arm Delay is triggered;
    * About Alarm Delay notification
    ① The host will beep DI every second in Alarm Delay is triggered.
  * Alarm info sending in first priority:
    ① If the alarm call comes when you are answering a call, your call will be cut. The alarm system will give you the alarm call in first priority to let you deal this alarm status;
    ② If the alarm host is making a dingdong doorbell notification while the triggering info is received by the alarm host, the host will give the alarm sound instead of the dingdong doorbell sound, and make the alarm call to the property owner;

*Low voltage alarm of wireless sensors
NOTE: It is programmable to set whether the low voltage status of wireless sensor will be uploaded to the CMS or not;
  ① Input “811+ENT”, the alarm host will upload the low voltage status information to the CMS, and storage the working records of the low voltage (including: sensor name, zone No., triggering time and date);
  ② Input “812+ENT”, the alarm host will not upload, and host will not store the working records of low voltage;

*Power-off notification function
★★ It is programmable to set whether the power off status will be notified or not;
  ① Input “831+ENT”, the LED indicator of alarm host will flash one time every 8 seconds;
  ② Input “832+ENT”, the alarm host will give no notification;
  ③ Default: No notification, systems will storage the power off record after power off in 30s

HOW TO CONNECT WIRED SENSORS
(2.2K balance resistor is necessary, please refer this info if you buy wired sensors)

1. Red + sensor +12V power output
2. Black - GND
3. White Zone 31 door sensor
4. Yellow Zone 32 curtain PIR sensor
5. Blue Zone 33 curtain PIR sensor
6. Green Zone 34 wide-angle PIR sensor
7. Purple Zone 35 wide-angle PIR sensor
8. Brown Zone 36 panic button
9. Grey Zone 37 gas sensor
10. Orange Zone 38 smoke sensor
Personalized Door Sensor

Features:
- Generally used in Perimeter zone to monitor the door/window status.
- It is an intelligent door/window sensor, it will monitor the door/window status when you are arming the system. The system will send notification on its screen if any door/window sensor is in status “open”, now you can arm the system by force.

Specifications:
- Power supply: rechargeable lithium battery 3.7V200mAh
- Wireless frequency: 433MHz or 868MHz
- Emitting distance: >100m (in open area)
- Service life of lithium battery: <3 year
- Alarm distance: <4cm
- Static current: 15μA  working current: 15mA

Installation and Usage:
- The suggested installation position is on the top of the door frame.
- Fix the small magnetic part onto the moving part of the door.
- Then fix the emitting part onto door frame, distance to ground should be higher than 1.6m to prevent from children touch.
- The space between the two parts shall be less than 10mm;
- If the LED indicator flashes frequently in red, please recharge the built-in lithium battery.
4. **Note about Wireless Intelligent Door Sensor**
- Each time only one piece wireless door sensor can be learned, one alarm host can hold only four pieces wireless door sensors.
- Each group can hold only one piece wireless door sensor, the first learned wireless door sensor will be covered/deleted if you learn the next PIR sensor into the same group.

**Wireless Wide-Angle PIR Sensor**

4. Note about Wireless Wide Angle PIR sensor
   - Each time you can add one wireless wide angle PIR sensor, totally one alarm host can hold max four wide angle PIR sensor;
   - Each group can hold only one piece wireless wide angle PIR sensor, the first learned PIR sensor will be covered/deleted if you learn the next PIR sensor into the same group.

Wireless Indoor Siren

1. Features:
   - Works with alarm host, wirelessly receives alarm signals from host and spot alarm with sound and flash;
   - Usually for indoor use.
   - Power supply type is optional, with disposable battery type, or with rechargeable lithium battery type;

2. Specifications:
   - Power supply: 100VAC-240VAC + rechargeable lithium battery/100VAC-240VAC
   - Receiving distance: \( \geq 100 \text{ M (in open area)} \)
   - Service life of lithium battery \( \leq 3 \text{ years} \)
   - Static current: 15mA  working current: 200mA
   - Wireless frequency: 433MHz or 868MHz

</table>

Symptom of problems Possible Cause Solution
Disposable battery type: 1. The disposable battery is disconnected; 2. The battery is exhausted; 3. You operated the PIR sensor when it was in the self-check progress; 4. The PIR sensor is not learned into the alarm system; 1. Open the back cover, check the installation position of battery, adjust its position; 2. Replace the exhausted battery with a new one; 3. Wait for 30s when the self-check progress is finished; 4. Relearn the PIR sensor into the alarm host; Meaning of Jumper position: "SS": detect once every 5 seconds; "SMIN": detect once every 5 minutes; |
Rechargeable lithium battery type: 1. The lithium battery connection inside the PIR sensor is disconnected; 2. The battery was died, beyond the service life; 3. You operated the PIR sensor when it was in the self-check progress; 4. The PIR sensor is not learned into the alarm system; 5. The power supply switch stays at "OFF" position; 1. Open the back cover, check the battery connection and connect the power cable again; 2. Replace the died lithium battery with a new lithium battery; 3. Wait for 30s when the self-check progress is finished; 4. Relearn the PIR sensor into the alarm host; Meaning of Jumper position: "SS": detect once every 5 seconds; "SMIN": detect once every 5 minutes; 5. Push the switch on the back of PIR sensor to the ON position;

VI. DAILY MAINTENANCE

To make the alarm system work for a long time stably and to prolong his service life, it is recommended that

- Try to put the alarm host in the dry and well-ventilated places, suggested in a higher position to avoid the children touch.
- Do not put the host and wireless sensors in too cold, too hot or dusty places, to prevent from curtailing the service life of electric elements, and prevent the plastic shell from distorting and accelerating to be aged.
- Do not put the host in too exposed places to prevent from being found by intruders, we suggest you to buy a wireless operation keypad to remote control the alarm host.
- Wireless operation keypad is recommended to installed at the door, install the alarm host in a hidden place, like bedroom, avoid being found and destroyed;
- Regular testing is necessary for finding and resolving problems in advance.
- Regularly check the battery status of alarm host and all wireless sensors is necessary. Replace the batteries, which are to be run out, to ensure they are working normally.
