2.1 Advanced Operations

2.1.1 WLAN Hotspot

Operations on Devices:
Home Screen → SETTINGS → Other → More Setting → More → Portable hotspot
→ Select “Portable Wi-Fi hotspot”

Select “Set up Wi-Fi hotspot” to set up “Network SSID”, “Security”, “Password” parameters

Operations on other devices (for example MIUI 2):
Home Screen → Settings → WLAN → Press menu → WLAN Display → Find the devices searched, click invite

* Ensure connected to the wired network, device can be used as wireless AP to support more wireless devices access in the family

2.1.2 Miracast

Operations on Devices:
Home Screen → My recommend → Miracast → Open Miracast service

Operations on other devices (for example MIUI 2):
Home Screen → Settings → WLAN → Press menu → WLAN Display → Find the devices searched, click invite

Complete connection, device will display other device images

2.1.3 DLNA

Ensure that other devices like iPhone, Android smart phone, etc have opened MediaShare, and they are in the same local wireless LAN with this device

Operations on Device:
Home Screen → My recommend → Media Center → DLNA DMR → Start DMR → ON

Corresponding device will be listed when device begin to search, a pop-up invite window appears, click “accept”
2.1.4 AirPlayer

Ensure that apple devices (iPhone, iPad etc.) are in the same local wireless LAN with this devices.

Operations on Devices:
Home Screen → My recommend → Media Center → AirPlayer → Start AirPlayer → ON

Operations on Iphone devices

2.1.5 Remote Control

Home Screen → SETTINGs → Advanced → Remote Control → ON → Show the IP address

Through WIFI, multimedia content (Images, music and videos) in Iphone devices can be transferred to TV for playing

Clean connection, device will display other device's images

* DLNA software including but not limited to iMediaShare
Ensure phone is in the same local wireless LAN with device, install RemoteIME.apk and start the program, choose the IP address, then you can control the device (support shifting between remote mode, movie mode, mouse mode and keyboard mode).

*RemoteIME.apk only can run well on android platform*
