1. USB 1: Connect USB devices, such as U disk.
2. USB 2: Same as USB1.
3. Micro SD: Micro SD slot-increase the storage size or read files directly from a Micro SD.
4. RST: The key for reset.
5. DC/5V: To connect AC adapter.
6. CVBS: To connect TV set with AV cable.
7. RJ45 LAN: To connect home network devices (routers/switches, etc.).
8. HDMI: To connect the high-definition TV set with HDMI cable.

Note: Above interfaces are only for reference, please make the final goods as the standard.
2/ PREPARE

Step 1
Use the HDMI cable to connect X5 TV BOX with your TV set or projection device. If it is an old TV, please use AV cable to connect X5 TV BOX with your TV set.

Step 2
Remote Controller: please put the batteries inside the RC. If you will not use the RC for a long time, please take out the batteries.

Step 3
Connect the power

Step 4
Turn on the TV, turn on X5 TV BOX

3/ REMOTE CONTROL

Operational guidelines for learning function:
1. Pressing [SET] for around 3s, unloosing after the light on.
2. Keeping a face-to-face state with the emission mouth of two remote controls, distance from 1~3cm.
3. Single-click the learning button of this remote control, the light will flash slowly; press the learning button that you need to learn with the TV RC about 2s and unloose, the light will flash 3 times quickly then turn on long time, it means finished learning.
4. Repeat step 3, when you need to learn other keys; after finishing learning, press [SET] to exit the learning state.

1) CAUTION
1. Never attempt your own maintenance. If something appears strange, please turn the TV off and consult your TV dealer or the company. The TV is composed of many delicate electronic components that can be damaged or broken if you open the TV or attempt to modify it.
2. Do not expose the TV to high humidity. Dust, steam, oily smoke, direct sunlight etc.
3. Do not use thinners or other chemical cleaners. Wipe the TV off with a soft cloth if it gets dirty.
4. Do not leave the TV in excessively hot or cold places. Premissible storage temperatures are within the range of -20°C to +60°C. Premissible operation temperatures are within the range of 0°C to 40°C.
5. Only use specified fadaports and power sources and battery packs.
6. For your safety, turn power off when not in use and unplug the adaptor.
7. Avoid dropping and strong impact.
CAUTION: for your safety, the driver should not watch the TV or operate the controls while driving.

PLEASE NOTE: that watching and operating TV while driving is prohibited in some countries.
SPECIAL CAUTIONS: that does not mean the TV is broken with some light or dark color dots on LCD. As it is sometimes inevitable with the TFT-LCD technology.

2) APPEARANCE
一、I/O function
1. Input power (DC 12V JACK)
2. Input Computer (VGA JACK)

三、Seven Key function sign

1  2  3  4  5  6  7
: 1 volume—  2 volume  3 channel—  4 channel  5 menu  6 switcher mode  7 POWER

3) OPTIONAL POWER SOURCES
AC household current: The optional AC adaptor allows the TV to be powered by standard household current (Please look over the AC adaptor).
The optional car adapter (apply to the car with positive polarity connected to the classes) allows the TV to be powered.
By a car battery through the vehicle’s cigarette lighter.

CAUTION
Please do not connect the car adaptor to the cigarette lighter with DC +24V of vehicles, such as truck of bus.
You must use the original accessories of this TFT-LCD TV. Use of unapproved AC/DC adapter of car adapter may cause damages to the TV set.
If the TFT-LCD TV will be unused for a long time, you must unplug the car adapter from the car adapter from the cigarette lighter of unplug the AC/DC adapter from its outlet.
Other damage to the TV will take place of run out of power of the car rechargeable battery.
In general, it is required to use the power adapters enclosed with the TV set. If you will use other AC/DC adapter, you must pay special attention to its voltage and power.

4). BASIC OPERATION
1. Connect the power and switch on the TV. Then the red<stand-by> indicator become green <working>.
2. Press button ◁ or AUTO to switch to PC/AV/TV mode.
   Plug in the catv cable or telescopic antenna and adjust it to a good position.
3. Press button “MENU” to adjust Brightness, contrast ratio and saturation of color.
4. Picture adjustment as follows: auto, horizontal, vertical, phase, clock.
5. Language mode:
   English, simplified Chinese, Francais,
   Italiano,
   Deutsch,
   Espanol, complex form of Chinese,
   PYCC
6. Press volume button to adjust TV sound system.

Note:
In the course of manual search, “v+” or “v-” can be used to change searching direction, but you may stop it by pressing “MENU”. When you search multisystem TV programs. It needs to set the sound system atone through which most programs can be received. Probably, some TV programs can not be identified, you have to adjust the sound system manually.

OPERATION FOR OTHER FUNCTION BY OSD BY MENU IN TV MODE
* System is for sound system options, such as DK/BG/I/MN/L.

PC-RGB OSD MENU
1. There are two OSD menu pages in the mode of PC monitoring. The first page is picture menu through which you can adjust the VGA signal transmitted from PC in respect of brightness, contract ratio. And picture “H-POSITION” and “V-POSITION” center as well to locate the pictures to a suitable position.
* In mode of PC, the unit can support VGA only. I.E. You must set the computer VGA output resolution at 640*480 before connecting
VGA cable, and the refresh frequency set at 60 Hz.
*when PC signal is received, the display may be normal, it need to reset.
Please enter the page 1 of the OSD menu, select "AUTO" and press "V+" or "V-" and enter, the screen will carry out image geometric adjustment automatically and border center will be determined.
*Please and adjust if when the inputs signal frequency shift is too large, you may adjust if to join accurate synchronization. The other items adjustment is the same as that in TV mode.
2. Menu on these condpgcis other function and white balance, including language, reset and display mode, the adjusting method is the same as TV menu. White balance is for the adjustment of RGB saturation, the factory set value is 5.0 it can be adjusted as user likes.
3. OSD menu in AV mode.
*There are two OSD menu pages. The adjustment is as TV OSD menu. AV.

5) EAR PHONE
Plug the earphone into the TV port. If you use earphone of other model, please make sure that its quality is ok.

6) EXTERNAL ANTENNA
If the image quantity is good enough, please meets the antenna or the closed circuit television coaxial cable in antenna, operation schematic diagram as follow:

7) TROUBLE AMENDMENT
The following conditions do not need any means TV is broke. Please check the causes as indicated below before requesting the repaired service.

8) SPECIFICATION

Name: TFTLCD digital color TV/MONITOR
Reception frequencies: (include CATV hyper band)
- VHF-1 49.75-160.25MHz
- VHF-3 168.25-464.25MHz
- UHF 471.25-863.25MHz
System: PAL (D/K,B/G,H,I,M,N)
- SECAM, PAL-M, PAL-N
- NTSC (to be selected)
(Annotation: NTSC and PAL are the two main broadcast television systems in use around the world, and they have difference in the frequency of the composite video base band signal. PAL have television standards with 25 frames/s, 625 lines/frame, upper field first. For normal digital PAL television, the standard image resolution is 720*576, 24 bit color depth, it supports aspect ratios of standard 4:3. PAL television standards used principally in China, European countries, refers to power frequency of 50Hz, video image made up of 25 frames per second, 625 lines/frame, video bandwidth 4.2MHz, 5.5 MHz, 5.6 MHz, and so on. PAL, short for Phase Alternating Line, is a color-encoding system used in broadcast television system, with a video format that has 625 lines per frame and a refresh rate of 50 interlaced fields per second (i.e. 25 full frames per second), such as B,G,H,I,N. There are also PAL with other resolution. For example, PAL system M used in Brail is used in conjunction with the 525 line, 29.97 frames/s (is identical to NTSC), using the NTSC color subcarrier frequency, with encoding of the PAL color carrier. Recently, most PAL televisions can receiver typically all of PAL systems. Many can also accept baseband NTSC-M, such as from a video game console or VCR, though not usually broadcast NTSC. There won’t be the differences among all kinds of PAL broadcast systems categorized by “Letter” as introduced above, if video signal such as that created by video game console or VCR is transferred over a baseband channel. In the case, PAL is a television system employing 625 lines, 25 frames per second, interlaced fields, encoding of the PAL color carrier. For digital video such as DVD or digital broadcast, there even isn’t difference in encoding of color. On this occasion, PAL means 625 lines, 25 frames per second, interlaced fields, that is the same as the SECAM. PAL-I is used in the UK, Hong Kong and Macau, PAL-D in mainland China. And Singapore uses PAL-B/G or PAL-D/K.)

Display element: color TFTLCD
Resolution: 640X480,800X600,1024X768 (to select)
Frequency: 60HZ~75HZ
Audio output: 150mW(max)
Speaker: 8Ω .2W

Connection terminals:
1. External antenna jack (to select)
2. Earphone jack
3. Power jack
4. VGA jack
5. AV jack
6. USB jack (to select)
7. AC_DC adaptor
