# WIRELESS MONITOR ALARM

**User Manual V1.3** 

Please read this user manual fully before installation.
Pictures are for indication and illustration purposes only.

# 1.Accessories

# 2. Appearance and keys introduction

Please make sure that all accessories are complete. Pictures are for indication and illustration purposes only.

# 3. Specification

GSM: 850/900/1800/1900MHz

GPRS: Class 12

Camera: 0.3MPixel, CMOS sensor

T-card: maximum 4G

Built-in battery: 3.7vDC/800mAh

LED indicator: Arming-yellow, GSM-green, Power-red

Built-in antenna: Built-in GSM Quad-bands antenna

Voltage range: 5vDC

Dimensions: 82.5(L) x 44.3(W) x 28.7 (H)

### Red LED (Power/ Working status)

Status	Implication
Quick flashing(interval 0.1s)	Low battery
Slow flashing(interval 1s)	Normal operating
Continuously in bright state	Battery charging
Continuously in dark state	Battery power loss/Internal problem

# Yellow LED (Arm/Disarm)

Implication
Delay arming
Arming
Disarming
Arm (10 seconds countdown)

# Green LED (GSM signal)

Status	Implication	
Quick flashing(interval 0.1s)	Searching (GSM Initialization)	
Slow flashing(interval 1s)	Normal operating	

Continuously in bright state	GSM conversation/GPRS activation
Continuously in dark state	No SIM card installed/No GSM signal

Note: All the LED indicators would turn off automatically after working for 5 minutes. They would turn on again when toggling Arm/Disarm switch or short pressing the On/Off key.

# 4. Notice for use

Please make sure all the accessories are complete when you open the package. If not, please contact your provider immediately.

larm host (main unit) 1	Lithium battery 1	Charger 1
JSB cable 1 Bracket 1	User manual 1	

This device helps resolve your worries if you are often not at home. Please install the device in the monitoring area.

When the human-body infrared sensor detects persons, the device would take pictures and video recording then save it in SD card. At the same time, your mobile phone could receive alarm MMS from

You can also check the pictures on online service platform.

Please refer to the following chapters for further using method.

# 5. Operation manual

# 5.1 Installation of SIM card and SD card

To insert the SIM card, please turn off the device; remove battery and other external power supplies; insert and slide the SIM card correctly following the arrow direction.

To remove the SIM card, please turn off the device; remove battery and other external power supplies; hold the notch of SIM card and lift it slightly up to take card out.

Remark: 1. Please use SIM card with GSM network.

- 2. Please confirm that the SIM card has opened GPRS service.
- 3. Please confirm that the SIM card has opened Caller ID and MMS function.

To insert the SD card, please remove battery and other external

power supplies; insert and slide the SD card with the metal part facing down following arrow direction at battery slot until SD card is completely inserted in right position.

To remove the SD card, please turn off the device and remove external power supplies. The SD card would pop up by slightly pressing.

Remark: When inserted and removed SIM or SD card, the device must be power off, or the cards would be easily damaged.

Please insert SD card before use. The device could not operate normally when the SD card is removed.

## 5.2 Switch On /Off After the battery is inserted, long press the On/Off key. It turns on

when the red and green indicators start flashing. Remark: If SOS number was set before, the device would send

message "Boot success" to the SOS number two minutes after turning on.

5.3 Installation of the device Fix the base with the bracket and keep the base rabbet upward.

 Put the device on the base with the camera facing forward and straightly to ensure that the photos and videos are taken in right direction. Then fix the bracket on the wall or other solid object.

(An electric outlet is available around.) Connect power for use.

# 5.4 Battery Charging

Make sure the charger is connected with power.

 The device could be normally used while charging. Continually bright state of the red LED indicates the device is charging. Slow

flashing indicates power is enough. Quick flashing indicates low power and charging needed. The charger could still be connected with power when the battery

is charged. Remark:Battery charging should be operated under 0℃~40℃ with

charger provided by the manufacturer. Any unauthorized charger may result in danger and breach of approval and warranty terms of this device.

# 6. Function settings

# 6.1 Parameter setting

6.1.1 Add or modify SOS numbers by SMS Only SOS numbers have the authority to remotely control the device.

SOS number could be added by SMS from any mobile phone: SOS, A, phone number 1, phone number 2, phone number 3#

"A" means adding SOS number

For example. SOS.A,13500000001,13500000002,13500000003#

Each SOS number could be set separately.

For example. SOS, A, 13500000001#---The first SOS number

SOS,A,13500000002#---The second SOS number

SOS,A,,,13500000003#---The third SOS number When SOS numbers are added successfully, the device would send

message to the relevant mobile phones. Example of the message: SOS1: 13500000001

SOS2: 13500000002 SOS3: 13500000003

# 6.1.2 Delete SOS numbers by SMS Delete by SMS from SOS phones:

SOS, D, number order1, number order2, number order3#

"D" means deleting SOS number SOS,D,1#----deleting the first phone number

SOS,D,2#----deleting the second phone number SOS,D,3#----deleting the third phone number

Delete several numbers at one time: SOS,D,1,3#---- deleting the first and third phone number

Delete phone number directly: SOS,D,phone number#---- deleting the SOS phone number

For example: SOS,D,13500000002#---- delete the SOS phone number,

13500000002 When SOS numbers are deleted successfully, the device would send

message to the relevant mobile phones. Example of the message reply: SOS1: 13500000001

SOS2:

SOS3: 13500000003

6.1.3 Add/Delete SOS numbers by service platform
Besides SMS, service platform is also available to add/delete SOS
numbers. You can log on the service platform provided by

numbers. You can log on the service platform provided by distributors or service providers to set SOS numbers.

The second phone number, SOS2, is deleted.

6.1.4 Language setting

Send SMS to the device from the SOS phone: LANG,D#
Set "D" as 0, the setting language will be English; set "D" as 1,

the setting language will be Chinese. Message replied when setting is completed:

a) Message reply when the language is set as English: The current

language is English.

b) Message reply when the language is set as Chinese: 语言设置成功!

6.1.5 APN setting

Send SMS command to the device from the SOS phone:
a) APN.network name# For example: APN,cmnet#

b) APN,networkname,username,user account#

For example: APN,cmnet,user,123456#

When setting succeeds, SMS is replied as "OK"

one is setting succeeds, SMS is replied as OK

6.1.6 Sever command setting

Send SMS command to the device from the SOS phone in the following two ways:

a) DNS: SERVER, mode1, domain name, port, 0#

For example: SERVER,1,www.ydpat.com,8011,0# b) IP: SERVER,module0,IP.port, 0#

For example: SERVER,0,211.154.135.113,8011,0#

Note: Currently only TCP protocol is supported. For dynamic domain

names, please change "SERVER" to "DSERVER"

6.1.7 MMS setting

Send SMS command to the device from the SOS phone in the following two ways:

a) MMS,MMS centeraddress,IP,port,Access point name(APN),user name,user account,type of connection#(0 means HTTP,1means

WAP)

For example:

MMS,http://kks.com,211.154.135.113,8011,cmwap,yang,3333,1#b) MMS,MMS center address,IP,Port,Access point name (APN)#For example:MMS,http://kks.com,211.154.135.113,8011,cmwap#Devices would automatically restart after setting

6.1.8 Query parameter setting

Query the current GPRS and MMS parameters

Send SMS command to the device from the SOS phone: GPRSSET# Example of the message replied:

GPRS APN: cmnet

GPRS name:

GPRS pwd:

MMS URL:

MMS IP: 211.154.135.113

MMS port: 8011

MMA APN: cmwap

MMS name:

MMS pwd: MMS type:

SERVICE SET

url: www.ydpat.com

mod:

addr:

port:

protol\_type:

#### 6.2 Arm/Disarm

6.2.1 Arm/Disarm by toggling the switch

Toggle the Arm/Disarm switch:

If the device is in disarm status, toggle the ARM switch once to enter delay arming status with the yellow LED indicator flashing. After 5 minutes it enters arming status with the yellow LED indicator continually lighting.

If the device is in arm status, toggle the ARM switch once to enter disarming status with the yellow LED indicator off.

6.2.2 Arm/Disarm by SMS

Arm by sending SMS command: "On#" to the device from the SOS

phone: If arm setting succeeds or it's in arming status, SMS is replied

as: "Alarm fortification success!"
Disarm by sending SMS command: "OFF#" to the device from

the SOS phone:

If disarm setting succeeds or it's in disarming status, SMS is replied as: "Alarm disarm success!"

# 6.2.3 Arm/Disarm by dialing

When the device is in disarming status, dial the device number from SOS phone and hang up in 10 seconds. When receiving the call, the device would enter arming status automatically and reply SMS "Alarm remote fortification success!" If the SOS phone does not hang up in 10 seconds, the device would enter voice monitoring status.

When the device is in arming status, dial the device number from SOS phone and hang up in 10 seconds. When receiving the call, the device would enter disarming status automatically and reply SMS "Alarm remote disarm success!" If the SOS phone does not hang up in 10 seconds, the alarm would enter voice monitoring status.

## 6.2.4 Arm/Disarm by service platform

Log in the service platform via IMEI number or account. Click the "Arm" / "Disarm" icon on the upper-right side of the page.

The device would instantly start "Arm" / "Disarm" operation when it receives command.

Remark: When log on the service platform via IMEI number in the first time, the system would automatically allot an account for log on use later.

# 6.2.5 Timing Arm/Disarm

If you don't need to monitor for 24 hours, you could send SMS command to the device from the SOS phone to set arming time period:

SMS command for opening timing arm: Time on# SMS command for closing timing arm: Time off# SMS command for setting time period:

TIME, PERIOD1, PERIOD2, PERIOD3#

Format of Time period: HH:MM-HH:MM;

Example of SMS command:
TIME. 00:00-08:00#---set the first time period

TIME, 00:00-08:00, 12:00-13:00#---set the first and second time period

00:00-00:00 means null time period.

When setting succeeds, the SMS would reply contents including arming status, timing arm status, arming time period, current time and SOS number.

Note: 1. The device would synchronize time once each day with the server via GPRS, thus manually setting time is not needed.

2. When entering arming time period, the device would automatically enter arming status from disarming status before.

# 6.3 Setting query via SMS

For setting query, please send SMS: "SET#"
The device would reply message as below sample:

SOS1: 13500000001 SOS2: 13500000002

SOS3: 13500000003

Timing fortification status: OFF

Fortification time: 00:00-08:00, 12:00-13:00, 18:00-20:00

Device current time: 2011-6-1; 16:57:29

IMEI is: xxxxxxxxxxxxxxxxx

Account: xxxxxx MMS alarm: ON

Picture resolution: 320x240

# 6.4 MMS alarm On/Off

MMS alarm On: Send SMS command: "MMSON#" to the device from the SOS phone.

When MMS alarm is On, the device would reply SMS: MMS alarm: ON

MMS alarm Off: Send SMS command: "MMSOFF#" to the device from the SOS phone. When MMS alarm is Off, the device would reply SMS: MMS alarm: OFF

# 6.5 Photos taking

#### 6.5.1 Via SMS

Send SMS command, "PHOTO#" or "333" to the device from the SOS phone. If the device is on, it would take photos and send MMS of these photos to the above SOS phone.

### 6.5.2 Via service platform

Log on the service platform and click the icon "Take photos" on the upper–right side of the page. If the device is on, it would take photos and send these pictures to the platform.

Note:1. All letters and characters of SMS command should be input in English. No blank space is permitted and the format should be completed.

- 2. No case sensitive
- Only preset SOS numbers can set remote arming, disarming and take photos.

#### 6.6 Infrared alarm

Under arming status, when the infrared sensor detects human-body: the device would take a set of photos. The first photo would be sent to the SOS number via MMS with message content "Emergency alarm", and the device would record a one-minute video automatically and save the video in SD card.

Both the photos and video would be saved in the corresponding catalogue PHOTO and VIDEO in SD card. If the storage capacity is not enough, the device would automatically delete the earliest photos and videos. Users may check the photos and videos on the computer by connecting device with USB cable.

## 6.7 Power cut-off alarm

When the electricity supply is cut off, the device would send SMS: "Alarm main power is interrupted, please pay attention!" to the SOS numbers. At the meantime, the device will upload power cut off alarm data and time to the server via GPRS.

## 6.8 Low battery alarm

When the device is detected with low battery, it would send alarm SMS "Alarm main power is low, please pay attention!" to the SOS numbers. At the meantime, the device will upload low battery alarm data and time to the server via GPRS.

### 6.9 Power off alarm

When the battery is too low to support operation, the device would send alarm SMS "Alarm is shut down". Then it turns off subsequently.

#### 6.10 SD card failure alarm

When the SD card is not inserted or the inserted way is not right, the device would send alarm SMS "Alarm memory card detection failed, please make sure that the memory card is inserted, or the card space is available!" to the SOS numbers. When received this SMS, please insert the SD card again in the right way.

# 6.11 Check photos and videos in SD card

Take off the device and charger, turn it off and connect it with a computer via USB cable. Photos are in the catalogue "PHOTO" and videos in the catalogue "VIDEO".

# 6.12 Voice monitoring

When the specific SOS phone dials the device, ringing for 10 seconds, it will enter voice monitoring status. At this time, caller can monitor the sound in the area.

Note: 1. The SIM card put into the device should be equipped with caller identification.

To realize this function, please set special numbers beforehand.
 If infrared alarm is activated during monitoring, monitoring function would be interrupted for emergency alarm.

# 6.13 Service platform

User could log in service platform:  $http://www.cootrack.com\,to\,set\,arming,\,disarming,\,taking\,photos.$ 

#### 6.13.1 Check information

Instantly uploaded alarm photos could be checked in the alarm photo column on the home page. Instantly uploaded power cut off alarm and low battery information could be checked in the alarm information column.

The relevant account, IMEI number, device status online or not, arming status could be checked on the home page.

#### 6.13.2 Reset

User with SOS number phone can send "RESET#" to the device. The device would restart in 30 seconds and reply SMS" boot success!" This command is used when the device is operating abnormally.

#### 6.13.3 Restore to factory setting

User with SOS number phone can send "FACTORY#" to the device, which would reply "success!" This command is used when the device is operating abnormally due to parameter change.

#### 6.13.4 Set photo resolution

User with SOS number phone can send "SIZE,0#" or "SIZE,1#" to the device to set camera resolution. "1" means the camera resolution is 640x480; "0" means the camera resolution is 320x240.

Note: 1. With 640x480 resolutions, the camera would take only two pictures when infrared alarm is activated. The uploading time is relatively slow.

2. With 320x240 resolutions, the camera would take three pictures when infrared alarm is activated.

# 7 Appendix

# 7.1Battery safety

Please use the battery provided by the manufacturer of the device. Any use of other accessories would lead to void warranty service. The terminal manufacturer is not liable for any damage resulted from using accessories from other channels.

New battery should be fully charged (12 hours) and discharged for two or three times to achieve the best performance.

Battery can be charged and discharged for hundreds of times and finally get useless. When calling time and standby time is decreased obviously, you need to change new battery.

Touching any metalobject (key in pocket) would easily cause battery short-circuit.

Do not forcibly bend and open battery.

Keep the battery away from water and fire.

Battery should be charged at room temperature. If temperature is lower than 0°C or higher than 45°C, the battery may not be charged

## 7.2 Troubleshooting

If there is trouble during using the device, please read the solution as follow or contact provider.

Common problems	Causes	Solution
Fail to switch on	Power off	Charge battery
Fail to monitor	The called number is not the SOS number	Set up SOS number
	SIM card without caller ID display function	Active function of caller ID display
Fail to connect network	Bad installation of SIM card	check SIM card installation
	Filth on the SIM card iron surface.	Clean it
	useless SIM	contact internet operator
	Beyond GSM service area	Use it in effective GSM service offer area
	bad signal	Try again in a better signal area
Fail to charge	The voltage is unsuitable	Connect with power with suitable voltage
	Bad connection	Check connection with charger
