Super Range “ride to rider” “rider to pillion” Bluetooth interphone/hand free Bluetooth headset / Bluetooth stereo music receiver for motorcyclists and skiers

You like to ride together; wouldn’t it be great to talk when you ride?!

From now on, you can talk with your motorcyclist friends by way of this new two way wireless Bluetooth communication system, or you can chat with your pillion.
Maybe receive a cell phone call without pressing a button. You can enjoy your favorite stereo music from your A2DP enabled cell phone or MP3 player or perhaps listen to the audio navigation message from your Bluetooth enabled GPS.
With this New Super-Range Bluetooth, you can do all these things even if you are riding or snow skiing!!
All this hands free functionality is contained within one self contained module that attaches to the side of your helmet.

Main Features:
Maximum talking range 100/500 meters between two riders, real two- way wireless communication between three riders by Bluetooth system
Up to 120Km working speed
Up to 7 hours talking time
Safe auto-receiving cell phone calls
Advanced A2DP & EDR Bluetooth profile

Stereo music/audio function (transmits from A2DP enabled cellphone/ FM radio MP3/ GPS)
Wind noise DSP cancellation
Water-resistance, all weather, Friendly for gloves

Read the manual carefully before operating the system, and operate the headset strictly according to the manual, otherwise performance might not be optimum
We will describe this communications kit as B (Bluetooth headset) I (intercom) M (music)

This BIM can either be used for rider or for pillion.

This BIM can connect with four Bluetooth devices: a Bluetooth enabled cell phone, two BIM (two riders or one rider and one pillion), an audio source which with a built in or a external audio Bluetooth transmitter.

This BIM is a multifunctional device for motorcyclists and skiers, it can be used:

1) **As a handsfree Bluetooth headset for cell phone calls**

   While out riding or snow skiing, the auto answer feature of the internal Bluetooth profile enables safe automatic Handsfree answering of the phone call automatically. It also offers a call rejecting function.

   —receive the cell phone calls even you do not need to press any button, you just need to rider your bike as normal, the process of receiving call will be automatic, after ring on of the call about 5 seconds; it will receive the call automatically. It also can offer rejecting call function.

   2) **As a two way wireless full duplex interphone between riders or between rider & pillion**

   The Maximum communication range over a high clear line of sight path can reach 100/500m 328/1640ft! (This maximum range is not guaranteed).

   Typical effective range in city is approximately 300m/950ft. Please note that actual range will depend on weather conditions, terrain, presence of obstacles, i.e. a large vehicle, buildings non line of sight etc.

   Unlike a one-way walkie talkie, which is only half duplex i.e. it can not speak and listen simultaneously, the BIM offers real-time talking like a normal telephone.

   It can connect with two other riders or connect with another rider and his/her pillion.

   The rider can chose which person to talk with

   The working speed can be up to 120Km!

3) **As a wireless Bluetooth music receiver and speaker**, this BIM has EDR and A2DP profile, with EDR and A2DP profile it can offer another important function— listening to stereo music from A2DP enabled cellphone,MP3 or navigation audio information from GPS(this MP3 or GPS should has a built in audio Bluetooth transmitter)

4) If your MP3, GPS did not have a built in audio Bluetooth transmitter, you only need to have a external audio Bluetooth transmitter (sometimes called an AV Dongle, you can find it easily in the market) to pair with them, then you also can enjoy this added functionality.

5) **As the speakers of your MP3/GPS**

   If your MP3 or GPS is not Bluetooth transmitting enabled and you have not a Bluetooth AV dongle, the BIM also offers another method of listening to the stereo music/audio info— the simple wired method. Plug the audio source directly into the BIM headset via the 3.5 mm stereo connection.
6) FM Radio operations
This product is equipped with high-quality FM radio receiver. This section will explain how to use the FM radio function. When you do not use sound or any other audio source, you can listen to FM radio. Listening to the radio, you do not have to worry that you will not receive the call. When a call comes in or when you want to call, Bluetooth FM radio will automatically turn off and routed to Bluetooth intercom headset; when the call ends, the Bluetooth radio will automatically back to radio mode.

**Turn on FM radio**
In standby mode (whether mobile phones or cars on the car phone), turn on FM button will turn on FM radio. It will be the last time channel that you listen to at last.

**Turn off FM radio**
Listen to the radio, press FM button will turn off FM radio.

**Switching the current radio channel**

**Search for new FM radio channels**
Listening to the radio, press the volume button + or the volume button - until you hear the next channel. Choose the last channel by pressing the volume button +, choose the next channel by pressing the volume button -, when the channel is found, the search stops and listen to your favorite channels. Long press the volume keys to adjust the volume.

Main BIM communications unit
Clip & hanging-hole for mounting the main BIM unit

The clip
Speakers/Boom Microphone/audio plug

The AC & USB Charger

The charging cable has a small USB plug for the headset and the large USB plug for the computer or AC adapter; please observe to correct orientation of the USB plug and socket before inserting
1) Insert the USB plug of the charging cable, into the USB small jack of the headset; you can either charging by computer or AC adapter.
2) While charging, the red LED on the headset module will illuminate, when the charging is finished, the red LED will extinguish.

Note: if you do not use the headset for a month or more, to protect the Poly-Li battery, please charge the headset at least every month. (The fault damaged by wrong charging will be not guaranteed).

Attaching and removing the BIM main unit on your helmet
With the clip, you can easily mount the main unit of the BIM on a helmet within 10 seconds without any tool and screw.

Step:
1) Find a best position on the left side of your helmet to put the clip
2) Insert the clip between the shell and the foam of the helmet
3) hang the main unit of the BIM on the clip

We have provided you with the ability to charge the system via the USB port of your computer or if you are away on a trip, you can use the supplied Multi-voltage USB power adapter.
Attaching the two speakers and the microphone.
The success of the system depends on the careful positioning of
the ear speakers directly over top of the ear canals. This will give
the best signal to noise of the received audio.
1) To find the position of your ear canals, put your helmet on firmly but
don't do it up. Slide your thumb of one hand up between the inside
of the helmet and your ear, with the fingers of that hand on the
exterior of the helmet. Feel the ear canal in your ear with your
thumb and then grip the helmet firmly between thumb and fingers of
that hand, carefully take the helmet off BUT don't move your thumb
from its position inside the helmet. Look at where your thumb!
This place marks the centre of the ear speaker! Mount the Velcro
pad to which the speaker will attach there, inside the helmet; check
the other side for optimum ear speaker position.
2) Remove the protective backing of the Velcro and mount the Velcro
pads in the correct positions, attach the two speakers on the Velcro
inside your helmet, the speaker with short wire cord for left ear, the
speaker with long wire cord for right ear.
Adjust the position of the microphone.
Note: To reduce the external noise, you need to close the visor while
riding, and please adjust the position of the microphone to be right in
front of your mouth with the foam just touching your lips; the visor should
cover the microphone effectively! (Minimizes wind noise contribution)

V
Correct position of the microphone

X
Wrong position of the microphone

3) Plug in the positioned headset to the communications module and
attach it to the side of the helmet.

4. Operation:
The operation is friendly and very easy.
Pairing with your Bluetooth phone for the first time
Note: You must have a Bluetooth enabled phone to “Pair” with the
BIM
The rider and pillion pairing their headsets with their respective mobile
phone should be at different time,
Before using the BIM, please familiarize yourself with Bluetooth function
of your cell phone. Read the instruction manual that came with the
phone so you can enable its Bluetooth function.
Before you can use this BIM in combination with your phone, you will
need to “pair” it with your cell phone for the first time. This usually only
needs to be performed once with that individual phone however follow
the instructions supplied by the phone manufacturer and save the
“pairing” so it will be automatically connected when this Phone and
the BIM come into contact again.
1) Enable the Bluetooth function on your cell phone.
2) You must place the BIM in “Pairing mode”, this is done by way of a
holding down the Power/Interphone key on the headset, until the
red & blue LED flash alternately.
3) Begin the “searching for Bluetooth device” on the cell phone
according to the phone’s instructions
4) When the BIM is discovered, the cell phone will display MOTOR
PHONE select this and accept the connection
5) The cell phone will ask you to input a password to enable this
connection, when prompted input password: 0000 (four zeros)
6) Your phone will confirm that pairing has succeeded. Note that the
only light showing on the headset is now the blue one and it will
flash once every 5 seconds

Basic B.I.M Operation
Turn on press the Power/Interphone key for 6 seconds or so, until the
blue lamp illuminate, promptly release the Power/Interphone
key, then the blue led will flash every 5 seconds
Turn off press the Power/Interphone key for 6 seconds or so, until the
blue lamp long illuminate, promptly release the Power/
Interphone key then the blue led will extinguish.
Increase the volume Short press of the V+ key
Reduce the volume Short press of the V- key
Connect the cell phone for some reason (e.g. In some regions of high RF strength), may the BIM will lose connection with the cell phone, a short press on the Phone/Play key, they will connect each other.

Safety Cell phone calls function
1) Receive a cell phone call automatically
When income a cell phone calls, you will hear the ring on the cell phone and about 3-5 seconds later, the BIM will receive the call automatically.
2) Terminate cell phone call
When you finish talking on the cell phone, a short press the Phone/Play key, will terminate the call.
3) Reject a cell phone call
When income a cell phone call, you will hear the ring, immediately press the Phone/Play key within 1 second, it will reject the call.
4) Make a cell phone call
Dial a number on your phone as normal, ( but don’t do this if you are the rider only if the pillion!) the sound will be automatically heard in your headset
Notice: some phones, like Panasonic x70, will not send the audio to the headset, you may have to press the Phone/Play key to transmit the sound to your headset
5) Dial the last number
Press the Phone/Play key 2-3 seconds, it will dial the phone number that you dialed last time. (Note: some cell phone do not support this function)

Interphone Function
Set up for bike-to-bike and rider-to-pillion intercom: pairing
Pairing is a one time process that is required for mutual recognition between a headset and other Bluetooth devices. once the two headsets are paired, they will retain paired whenever they are within range. Please note that you can speak via intercom to one buddy headset at a time.
1) Pair with another rider
Simultaneously hold the power/interphone key on both matching BIM's until the red & blue LED of the two pairing BIM's flash, short press the power/interphone key on one of BIM, a moment later the red LED will extinguish and the blue LED then will flash briefly every 2-5 seconds, thus they have finished the pairing.
2) Pair with two other riders and chose which rider you will talk with
You can set up your BIM as a master device and you can pair with two BIM of other riders, then you can talk with two riders at different time.
STEP: Pair your BIM (BIM a) with one rider (BIM b) as 1) above, then turn off the BIM b. Pair your BIM with another rider (BIM c). When finish the pairing procedure, you can turn on the BIM b.
Initiate an intercom call (a short press the Power/Interphone key on your BIM), and you can talk with BIM c. However, a long press the Power/Interphone Key, you will hear a beep "du-du", promptly release your hand; it will change the communication to talk with BIM b.
Note: for a, b, c three units, only two units could be set as master units, then the third (slave) unit can not initiate an intercom talking, when one of the master unit change communication to talk with the slave unit, the slave unit will become master unit.
3) Pair with your pillion
If you only have paired your BIM with one rider, you also can pair your BIM with your pillion.
Start/finish a interphone talk
Turned on your BIM, short presses of the power / interphone key then wait about 5 seconds, and then you will be able to communicate with another rider or your pillion.
You only need a short press of the power/interphone key, to terminate communications
Note, to reduce power consumption, when you do not need to talk, don’t keep your BIM on intercom state in a long time

Music function
1) Listen to stereo music from your A2DP enabled cell phone
Read the user manual of your cell phone carefully, if your cell phone is A2DP enabled, the BIM can receive the stereo music from the cell phone.
Please note that only A2DP (stereo Bluetooth) enabled cell phone can offer Bluetooth music transmitting service. You can use the Phone/Play
key to pause/play the music from A2DP Bluetooth devices.

2) **Listen to music from some mono Bluetooth enabled cell phone**
Almost all of Nokia mono Bluetooth enabled cell phone can offer Bluetooth music transmitting service, but some model of other brand cell phone can not offer this service.

*We do not promise that the BIM will support music function for all mono Bluetooth enabled cell phones.*

**Step:** confirm that your BIM has paired with your cell phone; play the music on the cell phone, and then you can enjoy the music on your BIM.

Note: for mono Bluetooth cell phone, you can not use the Phone/Play key to operate the music; you only can operate the music on the phone.

3) **Listen to stereo music from your MP3 by Wired method**
The plug of the BIM cord (speakers & microphone cord) is 3.5mm, it will can be inserted into a major of MP3, insert it into your MP3 and play the MP3, you will can listen to the music from your MP3.

4) **Listen to audio navigation info from your GPS by Wired method**
The way is same to listening to music from a MP3.

5) **Listen to stereo music from MP3 via external audio Bluetooth transmitter**
If you have a external audio Bluetooth transmitter (it’s easy to find this product in the market), insert the plug of the transmitter into the jack of the MP3.

Pair the transmitter with the BIM according to the instruction manual of the transmitter.

Play the MP3; you can listen to the music on your BIM.

6) **Listen to audio navigation info from your GPS via external Bluetooth transmitter**
The way is similar with 7) above.

7) **Listen to stereo music from MP3 which with a built in Bluetooth transmitter**
Please familiarize yourself with Bluetooth function of your Bluetooth enabled MP3 (this MP3 must has Bluetooth transmitting function).

Read the instruction manual that came with the MP3 so you can enable its Bluetooth function.

Pair the MP3 with the BIM according to the instruction manual of the MP3.

Play the MP3; you can listen to the music on your BIM.

8) **Listen to audio navigation info from your GPS which with a built in Bluetooth transmitter**
The way is similar to listening to music from MP3 which with a built in Bluetooth transmitter.

**Auto Switch between different operations**
While talking by intercom or listening to music, if it incomes a cell phone call, the voice will be switched to “cell phone talking” state automatically.

After the call has been hung up, the system will auto return to intercom talking or music playing state.

While listening to music, short press the Power/Interphone key, it will launch an intercom talking after hanging up the call, the system will return to the music automatically.

**Note:** it might need about 5 seconds to auto-return to “intercom talking” start after the “cell phone talking” has been hung up.

**Troubleshooting:**

1. **Not working**
   Could be a flat battery, charge the BIM 3 hours.

2. **Reset**
   In some regions of high RF strength is near high power TV transmitters, GSM station or airport radars, these can overwhelm the CPU in the BIM causing it to latch up however, a short press the Reset key (the gray key near the Power/Interphone key) and Power/Interphone key simultaneously, or charge the unit, will normally work again.

3. **No sound**
   Physically checks to see the headset cables are ok swap with the other functioning BIM to localize the problem. Have you turned to volume too low?

4. **Whistling of the speakers**
   If the microphone is too closed a speaker, the speaker will make a whistling, take the microphone away from the speaker, it will be ok.

5. **Lose connection with the cell phone or music from the cell phone**
   For some reason (e.g. in some regions of high RF strength), maybe the BIM will lose connection with the cell phone or music from the cell phone, a short press on the Phone/Play key, they will connect each other or see the below 8.
6. Can not connect with your mobile phone
This BIM can connect with a major of Bluetooth enabled cell phone of main brand, but **we don’t undertake that it can connect with all cell phone.** Before purchasing, please confirm that if the BIM could connect with your cell phone.

7. auto-power off
To cell phone call, intercom, music these different using, This BIM takes different Bluetooth profile. When change between different using, it will change to the corresponding profile.
Some cell phone maybe do not take standard Bluetooth profile, when it connect with the BIM, some times it may cause turning the BIM off when the BIM are switching between three different state(call, intercom, music).
in this case, you could turn on the BIM again by pressing the Power/Interphone key, and note that only work on two profile.

8. Final solution
If the solution of above clause 1.- 7.can not resolve the problem, turn your cell phone off and your BIM, then turn them on and pair them again.

**OTHER FEATURES**
- Digital Signal Processor (DSP) Technology for wind noise cancellation
- Excellent performance at speeds up to the legal limit with a full face helmet
- Easily mounts to all full face and open face helmets

**GENERAL FEATURE**
- Up to 7 hours talk time when connected to your cell phone
- UP to 7 hours time when listening to music
- Typical current consumption is 55 ~75 mA
- 100/500 mAh Li Polymer battery ·Standby time: 100 hours
- Charging time: 3~ 6hours
- Chip brand: CSR

**SPECIAL FEATURE**
- All weather, rain and snow resistance
- Removable headset unit from the helmet
