

# Telephoto Lens for iPhone Instruction Manual

- If the camera of the iphone can not take a clear image, you may manually fine-tune the focus by adjusting the focus ring (4) which is located in the front portion of the lens. For long distance focus (e.g. focusing to infinity), turn the ring clockwise until the image is sharp and clear (Care must be taken to avoid screwing off the telephoto lens from iphone case). For close focus, turn the ring anti-clockwise until the image is sharp and clear.

### Care & Maintenance

- Clean the unit with a soft, damp cloth. Never use chemicals or hard abrasives.
- Keep this product away from wet or damp to avoid overturn when using the mini tripod with your phone and telephoto lens.
- To avoid overturn, make sure the phone is well balanced when it is attached to the tripod, especially when the telephoto lens is also attached to the phone bracket, failing to do so, may cause damage to the iphone and / or the lens.

### Instructions for use

- In order to ensure maximum stability extend all the legs of the tripod out as far as possible.
- Put the iphone into the iphone case, make sure your phone is compatible with the case, failing to do so may cause damage or scratches on your iphone.
- Attach telephoto lens to the iphone case by screwing the lens clockwise onto the bracket until it is tightly fixed.

- Pull up the metallic, flexible handle and place the jacket in it.

- (1)Screw the universal holder to the tripod, and (2) tighten the knurled nut towards the holder in order to hold it in place.

Tighten the locking screw (3) clockwise to prevent the movement of the attached iPhone.

## Specification

\* **Minimum Focus Distance: 3M**

\* **Magnification: 12X**

\* **Angle of View: 70°**

\* **Size: 30 x 75 mm**

## Including

- Telephoto lens
- Cleaning cloth
- Universal holder
- Mini tripod
- Iphone protection case (for iphone 5 )
- bag

## Safety Instructions

- Do not use telephoto lens to look at the Sun or bright light source, as it may cause instant and irreversible damage to your eye. Eye damage is often painless, hence there is no warning to the observer that the damage has occurred until it is too late.
- Do not expose telephoto lens to sudden temperature changes as this will result in fogging of the optics. If this occurs, allow the product to adjust to the environment temperature after which fogging should clear.
- Place the tripod on a stable, level surface free from vibrations and away from sources of heat.
- Keep free from dust, lint, hair, etc.
- Do not use this unit for anything other than its intended use.
- Keep this product out of reach of children.
- This product is not a toy.

## Description of Parts

- (1) Telephoto lens
- (2) Universal holder
- (3) Mini tripod
- (4) Iphone protection case
