Troubleshooting Guide

1. Driver or application software installation failed
   a) ensure at least 50MB of hard free disk space.
   b) Before installing the driver, close all other programs.

2. LED indicator light, not flashing
   a) check the SIM card is inserted into the SIM card slot fully and make sure the correct direction.
   b) If the indicator light is still not flashing, disconnect the USB port and re-insert SIM card, and re-connect.

3. The application can not start
   a) HSDPA USB Modem connect to the PC, please wait about 5 seconds and then run an application. The application will automatically test the equipment connected or not and the SIM card inserted correctly or not.
   b) Follow below steps to check the modem driver:

4. HSDPA USB Modem connection failure
   Check HSDPA wireless Internet service to be opened or not in local region. Check SIM card to support
3G Wireless Data Card

HSDPA service or not, please contact with your local network operators.

a) If the SIM card is a prepaid card, make sure whether the card has enough balance.
b) Check the dial-up connection, click on its "Properties" to verify the connection of the modem whether to use "HSDPA USB Modem".

5. HSDPA Modem connection is ok, but immediately disconnected

a) May be is SIM card problem, try another SIM card supporting HSDPA service.
b) Check the dial-up connection, click on its "Properties" to verify the connection of the modem whether to use "HSDPA USB Modem".

Guide To Dial-up Failure

1. Modem hardware failure
   Question: caused by the own Modem of the PC.
   Solution: disable the own Modem.

2. There is no dial tone
   Question: customers insert wrong SIM card or SIM card inserted not properly.
   Solution: insert the SIM card with internet business

b) If it is not the SIM card problem, it is network server instability, and just try another SIM card.

6. Driver did not complete the un-installation:
In order to make sure to uninstall the software from the "Control Panel" safely, do not pull out the USB Modem during the uninstall process and wait for the completion of the software to uninstall, and then go to "My Computer"->"Manage"->"Device Manager"

3G Wireless Data Card
Scan for hardware changes again, this time will pop up one window, saying need to install device drivers, all cancel the install request, and then these devices will become a yellow question mark icon, right-click on these devices, select "Uninstall" to completely uninstall device drivers, so you can uninstall the USB Modem driver safely and completely.

Note: different card with different port
3G Wireless Data Card
or insert the SIM card properly.

3. Failed to respond to user
Question: not respond to user due to busy or not enough signal strength.
Solution: re-dial-up or move to other place to dial-up.

4. Remote computer did not respond
Question: SIM card is invalid.
Solution: insert the SIM card with internet business.
