

Solar Bag Manual

Instructions

Solar Charging Bag is an eco-friendly mobile power generator designed to charge portable gadgets including mobile phones, iPod, MP3 players, GPS devices and some cameras. (Note: This model is not designed to charge laptop.)

The power is stored in a lightweight Li ion rechargeable battery, which can provide a steady stream of charge to your gadgets, even when the solar bag is out of the sun. The battery can also be charged utilising mains electricity through the AC adaptor or USB charging cable provided. The solar panel is lightweight and highly durable –it is designed to withstand the rigours of everyday life.

Solar bag contents

- solar bag

Charging a device:

Solar backpack are designed to charge a wide range of devices easily and effectively.

Firstly, select the USB connecting cable and plug this firmly into the Power battery USB socket; Secondly, choose the adaptor that fits your device and plug into the end of the USB connecting cable, then simply connect to your device and press battery switch around 3seconds, it will charging device. (Picture 2)

User can also use their original USB charging cable to connect with the battery to charging your device.

Optimum Battery Charge Conditions

For optimum results, place the backpack in direct sunlight with the solar panels positioned towards the sun and make sure the solar panel is clean.

The battery stores any power generated by the solar panels until required to charge a device, so it is important to maintain the battery connection to the solar panels whenever possible.
