Safety and performance

Emergency services

In any country, if you want to make emergency call, dial 112

△ Note: As determined by the nature of cellular network, not all emergency calls can be guaranteed success.

Mobile phone

Mobile phone contains sophisticated electronic circuitry, magnets and battery systems and should be handled with care, especially note following points:

- Your mobile phone will generate electromagnetic fields; do not put it near the magnetic storage medium like computer disk near.
- Note: If the battery is damaged, avoid contact with things inside. If contact with skin, wash with plenty of water, if necessary, should seek medical help.

The manufacturer has the final interpretation of the manual.
1. Appearance

Your phone has a single display screen; camera, SOS button, built-in vibration motor, an earphone, a charger, USB cable and an external memory card (T-FLASH card) slot.

2. Getting started

2.1 SIM card installation
Remove the back cover by pressing down slightly on the back cover and sliding it in towards the base and then remove the battery if fitted. Slide the Sim card into the slot shown, taking care to place it “circuit side” down and align the notch on the card with the notch on the receptacle.

2.2 Memory card installation
If extra storage capacity is required you can install a memory card. (This device uses T-FLASH memory card).
2.3 Battery installation
Remove the back cover by Screwdriver

2.4 Charging the battery
New battery will achieve optimal performance after fully charging and discharging several times.

2.5 Battery use

Warning: Any kind of battery short circuit may cause explosion, fire or personal injury and other serious consequence!

2.6 PIN code

PIN1 code: the personal identity code to enter SIM card, it can prevent others from using your SIM card without your permission.

PUK and PUK2 code (8 digit)
To change the blocked PIN code, PUK code (personal unblocking key) is needed. To change the blocked PIN2 code, PUK2 code (personal unblocking key) is needed.
If these two codes are not provided with SIM card, ask your local service supplier.
Warning: If you input the wrong PIN code three times, SIM card will be blocked, please contact the network operator for help decoding.

3. Brief Introduction to Your device
3.1 Call key/OK Key
Used to initiate the call (when phone number is
input or already in the phonebook), also used to answer the call. In standby mode, press this key to display recent call records (all received\missed\dialed numbers, can display up to 60 numbers); in standby mode, pressing the key twice will dial the last number called.

3.2 Power on/off key, End call, cancel key
Long press the key for 2~3 seconds to switch on/off the phone.

3.5 Numeric keys
In standby mode, 1-9 keys enter numbers and characters, to make speed dial (once a number has been allocated). Press any key of 2-9 for more than 2 seconds; you can quickly dial the numbers in speed dial list.
Note: long press“1” key in standby mode means call voice mail service; this number needs to be set to voice mail center number in advance.
0 Key
Press for 2-3 seconds to enter Silent mode or back to General mode.
Press when in camera mode to take pictures.
Press when in text mode to enter a space.

#. In standby mode, long press “#”, you can speed dial a special family number (male). On this key you can see a male face silhouette for easy reminder

* In standby mode, long press “*”, you can speed dial a special family number (female). On this key you can see a female silhouette for easy reminder

In number dial mode, continuously short press “*” key, you can enter either “+”, “P” or “W”. “P &W” is to call an extension, “+” is for international calls.
Tip: the difference between “W, P” is that, P is to pause for 3 seconds and then send DTMF directly. W will have a window pop up asking the user whether to send DTMF.

3.5.1 Keypad human voice response
You can hear numbers called in human voice when you press each key.
The phone is default to Human voice off
To set to on, Menu-settings-User profiles-(select profile like General) customize-select tone settings-keypad- select Human voice or Tone or Click or Silent.

3.6 Language and input method
English is the default

3.7 Incoming call mode
Your phone has built-in vibration and buzzer; you can set the following call patterns in profiles:
3.8 STK Service
STK Service is SIM card toolkit, specific menu items are determined by SIM card and network.

3.9 Incoming call groups
Phone groups can be divided into family, friends, colleagues, important people, others and so on. Users can set different ringtones for different groups.

3.10 Making a call
- Making a call, the simplest way to make a phone call is to use numeric keys to enter the phone number, and then press Call key. If you need to change or correct a number, please press end key to delete it. The screen will display call animation when dialing and display talk status information when connected.
- Press end key to disconnect.
- Make domestic phone call: area code - phone number - call key
- Make international phone call
- Some fixed telephone extension cannot get through directly, you need to dial the switchboard first, then the extension. If you enter a phone number, and insert “P” between switchboard number and extension number, the phone will dial it for you automatically. The way to insert “P” is as follows: continuously press “*” key for three times (then the screen will display “P”).
- Make fixed telephone extension (without “+”)
  Phone number + “P” + extension number + call key

Emergency call
In any country using digital GSM network, if you are in network coverage (you can check the network signal indicator on the top left of the screen), you should be able to call emergency services. If your ISP does not provide roaming service in the region, the display will show "can make emergency calls (EMERGENCY CALLS ONLY)", to tell you can only carry on that call. If you are in network coverage, even without the SIM card, you can make emergency calls. In Australia you can call 000. Mobile phones can also use 112 (emergency call) service, provided by the network operator services, if different, consult the network operator!

IMEI
It is International mobile phone identification number. Switch off the phone and remove the
battery; you can see this number printed on the barcode label on the back of the phone. This number is also stored in the phone, switch it on and enter "* # 06 #" to display.

4. Basic operations

4.1 Switch on
Press Power key for 2-3 seconds to switch the phone on. If SIM card has no password, the screen will display power-on animation.
If the screen displays “please insert SIM card”, switch the phone off, check whether your SIM card is correctly installed or not.
Insert SIM card, the phone will automatically verify whether the SIM card is available or not, then the screen will display following prompt in order:
1) "enter the phone lock password "— if you enable the phone lock
2) “enter PIN” — if you enable SIM lock
3) “no service” — network register fail, the phone cannot perform network services
4) “emergency calls only” — register to other network, only allowed to dial 000 or 112
5) “searching” — the phone is searching for network,
Note: If you do not know PIN code, contact your network provider.
The default phone password is “1122”.

4.2 Switch off
If want to switch off the phone, long press end key until the screen displays power-off animation.

4.3 Shortcut functions
In standby mode, press Up key to scroll through and select the shortcut functions. Press OK key to enter the function.
1. Camera
2. Search contacts
3. SOS Emergency settings
4. Alarm
5. Write message
6. User profiles

4.4 Make calls
- Enter phone number on the keypad (if enter wrong character, press end key to delete), press call key to start the call. To end or cancel the call, press “cancel” or power key;
- Use the phonebook to make call: enter phonebook in standby mode by short press end key, find names/phone number, press call key to start the call.
- Redial the recent dialed phone number: in standby mode, press call key, you can view last phone numbers and name list. Scroll to the
desired number or name, press call key to start call.

4.5 Adjust receiver volume
During talk, adjust the volume by press + - volume keys (left side keys).

4.6 Answer calls
When there is incoming call, it will prompt in the way of ring\vibrate\ring and vibrate\ring then vibrate, according to the phone settings.

To answer a call, press Call key.

Any key answer can be set in Menu- Settings -User Profiles-(select profile) customise-answer mode- any key on/off

To refuse a call, press power key

If you have applied the calling number identification service, the caller’s phone number will be displayed on the screen. If the number is stored in the phonebook, the name corresponding to the number will be displayed on the screen.

4.7 Dial/Speed dial
Your phone has 9 speed dial keys. You can customize these keys to correspond to the phone number. In standby mode, long press [2~9] key, you can quickly speed dial a call; [1] key is the specific number for voice mail speed dial, once set with the voice mail number, it can be used.

Note: Speed dial set up, Menu – Organiser - Family Numbers-set number-Select number (2–9) or (* female family) or (# male family) -edit-select number from phonebook-OK.

To change or delete a number select number as above and – options

Note. To enable speed dial;menu – organizer - family numbers-status-on or off.

Default is ‘On”

4.8 Send DTMF signal
When set “send DTMF signal” function, during a call, when you press numeric keys and “**” “#” keys, they will be sent to the receiver in the form of DTMF signal. If you do not start this function, dial extension number and some other functions may not achieve. Default is on.

4.9 Call hold
If you have the “call hold” service, during a call click “option”, function menu appears as follows:

- Hold single call
- End single call
- New call
- Phone book
- Message
- Sound recording
Mute
- DTMF

Note: Some menu items only arise in certain circumstances, or need local network support, such as "new call".

4.10 Message display

SMS
When the user receives an unread short message, the screen displays an unread message icon; the user can click to read the message.

4.11 Hands free
During a call you can select options-hands free to enter into hands free conversation.

Missed call
When the user misses a call, the screen displays a missed call icon, the user can click to view the missed call.

5. Main Menu functions
- Phonebook
- Messages
- Call centre
- Multimedia
- Organizer
- Settings

5.1 Phonebook
In this menu you will find
- CallView
- Send text message
- Send multimedia message
- IP dial
- Edit
- Delete
- Copy
- Move
- Caller groups
- Phonebook settings
