User manual:

Transmitter—switching it to ON, beginning the launch of the machine signals. the longest launch distance range to 1500m.

Receiver—The allocation of an antenna, the antenna plug of the plug at the bottom of transmitter, the antenna stretched as far as possible. Switching it to ON, the indicator light turns yellow that is to receive the signal. The headset cable into the jack, and then on the ear headphones, you will be able to hear the other side of the dialogue. Since the headphone cable as the transmitter is also used in the antenna, when used, it should be stretched as far as possible. Power switch and power switch the power switch to the right until the ticking sound heard. Now the power supplies to the transfer device. Rotary switch to the right will increase the volume. After you finished using the receiver, do not forget to switch off the power. Before using the receiver, checking if there is no electricity. The electricity shortage, please use the full power.
