How to test

Press the mode switch button and enter the testing mode. The LCD displays 0.0. Change the sensor's direction against sunshine ray. Wait for 30 seconds. And then the LCD displaying value will flash for 5 seconds. The flash value is the UV radiation level. After 5 seconds, it will return the clock display mode automatically.

How to set the time

1. Press the set button, enter the time display mode. For example, 0101 means 1st JAN. It will return the clock display mode in 10 seconds.
2. Press the set button two times continuously, it enters the minute set mode. When the minute is flashing, you can press the UP key to change the value. And press the SET key again and again, it will enter the hour set mode, the day set mode and the month set mode in turn. At the end, it will return the clock display mode.
