

SOLAR GIFT LIGHT JAR

Operating Instruction

HOW THE SOLAR POWERED LIGHT WORKS

During the day, the solar panel of the top converts sunlight into electricity and recharges the battery.

On the solar panel there is a photosensitive control switch, at night the light can automatically turn on using the electricity stored (you also can cover the solar panel with your hand to enter night mode).

After daybreak the light will automatically turn off the lights and enter charging mode, it can work 8-12 hours every day after fully charging.

WHERE TO PUT

No wiring or any installation is necessary for the product, just put it where there is sunlight, such as lawn, balcony, pool side, garden and so on.

It will be full of elegant environment for your mood, make your guests feel warm and comfortable.

At night, you can also put it in your office desk, your room, your cafe, your bar, your tea, make your life full in romance.

HOW TO USE

Please push the button left or right, not to press down.

The switch has 3 positions:

COLOR for gradual color-changing in RGB.

SINGLE for monochrome mode and the default for white. We can change the color of light according to your requirements such as red, green, blue, orange, purple.

OFF means light turning-off.

ACCESSORIES

2V/120mA solar panel and 1PCS 1.2V/600mA NI-MH battery

NOTICES

1. For making the solar panel work under high efficiency, please put it under the direct sunlight as long as possible.
2. You'd better put it under the direct sunlight because the outdoor sunlight has more energy than the indoor light.
3. It still can work in rainy days, but please keep it away from submerging. When sunlight is not enough, It will work a little shorter than normal situation.
4. The light will automatically work at night because of the photosensitive effect of photosensitive switch on the solar panel, but it will be affected if there is strong light around it, so you should keep it away against strong light.
5. Please tear off the protection film of solar panel for better sunlight absorption before your first use.
6. Please turn on the lamp head in a clockwise direction when opening the lamp holder and prevent your hard tweak to result in breaking the wire.
7. When the light stops working suddenly, please check if the battery is in good contact based on correct polarity direction. If yes, you will have to put it under the sunlight again for recharging.
8. Since the peculiarity discharging of the battery self, if the battery hasn't electricity because of no charging in a long time, please put it under the sunlight with a enough time so that the battery can be activated.
