

This is the quick start guide for Helmet Camera
(This model has video recording @ VGA, 30fps)

1. Product display :

1. Open battery cover and insert 2 x 1.5V AAA Batteries. Make sure positive and negative of the battery and connected in correct manner. Remember there is no memory built in, so SD card is required for video recording.
2. Press power on button, a logo of camera will be displayed within the LCD screen, and Laser light will be blinking. The camera is now working, but pressing the power on button one more time is required for video recording. The Laser light will stop blinking and logo of camera will start to flop, it is a sign that video recording has just started.
3. Video recording time will be depending on your SD memory capacity, recording will end if capacity is used up. Logo of camera will stop to flop and pressing power on button again will start second video recording
4. Two method of playing back video recording:
 - 1) Remove the SD Card, and connect it to PC via card reader. Data can be read and write from the card reader.
 - 2) Plug in USB connection with SD Card stored inside the camera, Mass Storage Mode will be automatically activated.
5. Power off :
 - 1) No command or action given in one minutes, camera auto shut down
 - 2) Manual power off required to take out battery
 - 3) Press hold of video recording button, Power will be off after a while

Remarks : We only provide helmet camera and accessories (Batteries and Helmet is not included)
