Timer Remote Cord

Thank you for purchasing Aputure® Timer Remote Cord

Aputure® Timer Remote Cord is a remote switch with the following timer control and exposure count control functions. It is very useful for time-lapse photography of blooming flowers, astrophotography, etc.

(1) Self-timer (2) Interval timer (3) Long exposure timer (4) Exposure count control (5) Remote switch function

- Connectable to the camera's quick-lock remote control socket.
- The time is settable in 1-second units from 1 second to 99 hours, 59 minutes, and 59 sec. The set time period can be used for any timer function.
- The remote switch function can be used without battery power.

Symbols used in this Instructions booklet:

- ⚠: Warning for preventing camera and Timer Remote Cord malfunction.
- 📖: Supplementary notes for using the Timer Remote Cord with the camera.
- 💡: HELPFUL TIP FOR USING THE Timer Remote Cord and taking pictures.
 - Keep this Instructions booklet handy for future reference

All the instructions in this booklet assume that the Timer Remote Cord and any other equipment are already turned on. Before proceeding, make sure the Timer Remote Cord and other equipment are on.

About the LCD Panel

The display panel uses a liquid crystal display. With time, the display will become lighter and harder to read. In such a case, take the product to your nearest Service Center to replace the display panel(at cost). At low temperatures, the display response may become slower. And at 60°C/140°F and higher temperatures, the display may blacken. In either case, the display will return to normal at room temperature.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:(1) This device may not cause harmful interference, and(2) this device must accept any interference received, including interference that may cause undesired operation. Do not make any changes or modifications to the equipment unless otherwise specified in the instructions. If such changes or modifications should be made, you could be required to stop operation of the equipment. This equipment has been tested and found to comply with the limits for a class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:Reorient or relocate the receiving antenna.Increase the separation between the equipment and receiver.Consult the dealer or an experienced radio/TV technician for help.

Nomenclature

- In the text, the Timer Remote Cord's buttons and dial are indicated by their respective icons.
- Reference page numbers are indicated in parentheses.
- The (6) icon indicates that the respective function or setting remains effective for 6 seconds after you take your finger off the respective button.

1.Installing the Battery

The Timer Remote Cord uses one lithium Cr2032 battery.

- To prevent camera misoperation, disconnect the Timer Remote Cord from the camera before installing the battery.

1. Use the tip of a ball-point pen or similar instrument to press the battery compartment button. Then open the battery compartment cover as shown in the figure.
2. Put the battery on the battery +- markings on the cover and make sure the battery orientation is correct. If the battery is installed incorrectly, the Timer Remote Cord will not operate.
3. Close the battery compartment cover.

If the battery contacts are soiled, corrosion or improper electrical contact may result. Before installing the battery, wipe the battery contacts with a clean cloth.

Installing the Battery

● Battery Check

When the battery level is adequate, the  icon will not be displayed.

- Battery life is about 3 years.

When the  icon blinks on the display panel, replace the battery with a new one.

- If you continue to use the Timer Remote Cord while the  icon blinks, Timer Remote Cord operation or picture-taking may stop suddenly.

- The Timer Remote Cord does not have a power switch.
- When the battery is removed, all Timer Remote Cord settings will be cleared.
- In low temperatures, battery performance may be affected temporarily. It should return to normal at room temperature.

2.Connection to the Camera

- 1.Remove the camera 's remote control socket cover.
- Put the remote control socket cover into the Timer Remote Cord 's remote control socket holder.

- 2.Insert the Timer Remote Cord 's plug into the camera 's remote control socket.
- The plug and socket will lock together.
- To push in the plug, press the top of the plug. Do not grasp the silver part of the plug. Touching the silver part will prevent the plug from locking onto the socket.

- Disconnection from the Camera
- To disconnect the plug from the socket, grasp the plug 's silver part and pull it out as shown in the figure.

3.Settings

● Mode Selection

Press the <MODE> button to select the desired mode.

● Each time the button is pressed, the mode changes in the following loop:

Settings

●SETTING THE Time and Exposure Count

(1)Setting the time for (☉)(■■■■)(☾)

1. Press the <D> dial to select the time unit to be set. Each time you press the dial, the blinking digits shift in the following order:

Seconds→minutes→hour.

2. After selecting the time unit (blinking digits), turn the <D> dial to set the desired time for that time unit.

●The time can be set from 1 see. For example, follow the steps below to set the time to 1 hour, 2 minutes, and 30 see.

① 00:00:00 Initial display.

② 00:00:00 ← Select the seconds display.

③ 00:00:30 Set the seconds.

④ 00:00:30 ← Select the minutes display.

⑤ 00:02:30 Set the minutes.

⑥ 01:02:30 ← Select the hours display.

⑦ 01:02:30 Set the hours.

⑧ 01:02:30 ← Register the time setting.

• The Jog dial turns in either direction without stopping.

• To set only the seconds, just complete steps 2 and 3. To set the seconds and minutes only, just complete the procedure up to step 5. You can then start the timer or change the mode with the set time taking effect.

Settings

(2) () Exposure Count Setting

Setting the Exposure Count

1. Press the () dial to select the exposure count display which will start blinking.
 2. Turn the () dial to set the desired number of exposures.
- Follow the steps below to set the number of exposures (max. 99).

① 

Initial setting.

②  

Select the exposure count display.

③  

Set the desired number of exposures.

④  

Register the number of exposures.

● Start/Stop

After selecting the mode, press the <  > button to start the timer operation. To stop the timer operation, press the button again. The timer operation settings will remain in effect.

● Display Panel Illumination

To illuminate the display panel, press the <  > button. The illumination lasts for 6 seconds. To turn off the illumination, press the button again.

Settings

● Hold Function

The Hold function disables all the Timer Remote Cord buttons(except <☀>) and dial to prevent any inadvertent alteration of the settings after the mode is set. It also prevents the <START STOP> button from accidentally stopping an operation that has started. Press and hold down the <☀> button for at least 3 seconds. until the <☀> indicator appears. To cancel this function, press and hold down the **HOLD** button for at least 3 seconds. Until the **HOLD** indicator turn off.

Before taking pictures, check that **tHOLD** indicator is off. Then press **☀** Button.

● Canceling the Settings

Setting the time and number of exposures to 0 cancel the respective mode. To cancel all the settings, press the <MODE> button, <☀> button, and <☷> dial simultaneously.

Camera Operation Notes

- Set the film advance mode to single shooting. If it is set to continuous, continuous shooting may take effect regardless of the timer control.
- For unattended shooting, focus manually. Normally, the camera executes AE and AF before taking the picture. However, if the camera cannot autofocus the subject, the picture cannot be taken.
- Do not use the camera's self-timer together with this product. Otherwise, the Timer Remote Cord's timer function may not operate properly.
- To protect the camera's shutter, do not replace the film during timer operations. Before replacing the film, first press the Timer Remote Cord's <☷> button to stop the timer operation.

4. Self-timer

1. Press the  button to select the <MODE> mode, then set the desired delay time.

2. Connect the Timer Remote Cord to the camera and press the <  > button.

- The  icon will start blinking and the time display will count down.
- When the delay time elapses, the picture will be taken.
- To cancel the self-timer before the picture is taken, press the <  > button again.

- For bulb exposures, select the long exposure mode. Setting the camera to *bulb* will not result in a bulb exposure unless the Timer Remote Cord's long exposure mode is also set.
- If you are using an AE mode, cover the camera's eyepiece to ensure accurate exposure metering.
- If the long exposure mode and interval timer mode are set in combination, the long exposure and interval timer will start after the self-timer delay elapses.
- If the exposure count is set to 00 (blank setting), the number of time interval shootings will be unlimited.

5.Interval Timer

Set the camera's film advance mode to single shooting, then follow the procedure below.

1. Press the <MODE> button to select the  icon, then set the desired time interval.

2. Press the <⏏> button.

- The camera will take a picture immediately. One picture will be taken at the set intervals thereafter.
- During each time interval, the  icon blinks and the time display counts down until the next picture is taken.
- To stop the interval timer operation, press the <⏏> button.

- ! • Set a time interval that is longer than the total time of the shutter speed and film advance time. Otherwise, continuous shooting will result.
- When using flash during an interval timer operation, the time interval must be longer than the flash recharge time. If it is shorter than the flash recharge time, shutter release-priority AE will take effect.

6. Long Exposures

Set the camera's picture-taking mode to bulb and the film advance mode to single shooting. Then follow the procedure below.

1. Press the <MODE> button to select the  icon, then set the desired exposure time.

2. Press the <START
STOP> button
 - The long exposure will start.
 - The  icon will blink and the exposure time will start to count down.
 - To cancel the long exposure, press the <START
STOP> button again.

If the camera's picture-taking mode is set to a mode other than bulb, continuous exposures will be made during the "long exposure" period or until the film runs out, whichever is faster.

7.Setting the Exposure Count

If only the number of exposures is set and the $\langle \text{START/STOP} \rangle$ button is pressed, the number of exposures will be taken at one-second intervals. When the number of exposures is set in combination with a timer mode, the result will be as described below. For details, see page 33.

-  : After the self-timer delay, the set number of exposures will be taken at one-second intervals.
-  : The set number of exposures will be taken at the set time intervals.
-  : Since the set number of exposures will be taken at one-second intervals, this is not a suitable combination.

1. Press the $\langle \text{MODE} \rangle$ button to select the  icon. Set the desired number of exposures.

- For autoexposure bracketing and flash exposure bracketing, set the number of exposures to 3.
- For multiple exposures, set the desired number of multiple exposures.
- If flash is used, the flash recharge time may not be able to keep up with the set number of exposures. Therefore, set the interval timer so that the flash will have enough time to recharge between exposures.

- If the number of exposures is set for the  or  modes, the remaining number of exposures is not displayed.
- If the number of exposures is set to 00 (blank setting), the number of time interval shootings will be unlimited.

8.Mode Combinations

The modes can be used in combination as described below.

- When a mode combination has been set and shooting begins, the mode icons are displayed. The icon of the currently active mode also blinks.

No.	 Self-timer	 Interval	 Long exp.	 Exp. count	Description	Application
1	●				Self-timer operates.	Specifies the time for starting the shooting.
2		●			Interval timer operates.	For time-lapse photography (blossoming flowers, etc.).
3			●		For long exposures.	For astrophotography.
4				●	The set number of exposures is taken at 1-second intervals.	Sets the number of exposures for No. 1 and No. 2.
5	●	●			After the self-timer delay, interval timer operation begins.	For time-lapse photography (blossoming flowers, etc.).
6	●		●		After the self-timer delay, the long exposure begins.	For astrophotography.
7	●			●	After the self-timer delay, the set number of exposures is taken at 1-second intervals.	

8		●	●		The long exposure is taken at the set intervals.	
9		●		●	The set number of exposures is taken at the set intervals.	For time-lapse photography (blossoming flowers, etc.).
10	●	●	●		After the self-timer delay, the long exposure is taken at the set intervals.	
11	●	●		●	After the self-timer delay, the set number of exposures is taken at the set intervals.	For time-lapse photography (blossoming flowers, etc.).
12		●	●	●	The set number of long exposures is taken at the set intervals.	
13	●	●	●	●	After the self-timer delay, the set number of long exposures is taken at the set intervals.	
14			●	●	Incompatible combination. The No. 3 setting will be set automatically.	
15	●		●	●	Incompatible combination. The No. 6 setting will be set automatically.	

9.Remote Switch Function

The Timer Remote Cord's release button can be used in the same way as **Aputure** Remote Switch. The remote switch function does not require battery power.

The release button can be pressed halfway or all the way. Pressing it halfway activates the autofocus and sets the shutter speed and aperture settings. Pressing it completely takes the picture.

For long exposures or continuous shooting, press the release button completely and slide it in the direction of the arrow. This locks the button in the depressed position. To release the depressed button, slide the button back to its original position.

- Even when  or  is active, you can still take a picture immediately by pressing the release button or the camera's shutter button.
- The current mode or set number of exposures will not be affected when the release button is used. The release button does not function during a long exposure.

Major Specifications

Type	Remote switch with built-in timer control functions and exposure count control.	
Compatible Cameras	Cameras equipped with a dedicated quick-lock remote control socket	
Control Functions	The < MODE > button selects the mode and the Jog dial sets the time or number of exposures. Various modes can be combined.	
	Self-timer	1 sec. to 99 hours, 59 minutes, 59 sec.
	Interval timer	
	Long exposure timer	
	Exposure count	1 to 99 to unlimited
Timer Start/Stop	With <  > button	
In-Operation Indicator	Indicated by the mode's icon displayed or blinking on the display panel and by the countdown of the remaining time or exposures.	

Hold Function	 appears when the <  > button is pressed for 3 sec. This disables all other buttons and dial. The Hold function is canceled by pressing the <  > button for 3 sec. again.
Display Panel Illumination	Pressing the <  > button illuminates the display panel for 6 sec.
Release Button	Provided for halfway and complete pressing. Release lock provided. Can be used to release the shutter even during self-timer and interval timer operations.
Camera Connection	Quick-lock remote control socket
Cord Length	80 cm
Power Source	One lithium CR2032 (3 V) button battery
Battery Life	Approx. 3 years. Exhausted battery indicated by a blinking battery-low icon on the display panel.
Dimensions	40 (W) × 20 (H) × 143 (D) mm / 1.57 (W) × 0.8 (H) × 5.63 (D) in
Weight	85g / 3oz (including battery)

- Subject to change without notice.
