## Package Items

IP Cam

Bracket

Plugs &  
Screws

Power Adapter

Ethernet Cable

Quick Installation Guide

## Installation Diagram

1. device horizontal installation

2. device vertical installation

## Connect the IP cam to the internet

1. Connect the power adapter to the camera.
2. Connect the ethernet cable to the Modem/Router and to the IP Camera.
3. The IP Camera will get an address from the Modem/Router(with DHCP enabled) automatically and will be connected to the internet.

### Warm Tips:

The wireless ipcam can work wired or wirelessly. However, it must be connected to the router with Ethernet cable for the first setting, making sure that your ipcam is under the same Lan with your Computer or smart phone. Then you can do the wifi setting on PC software or smart phone app. After setting the wifi successfully, you can let the ipcam work wirelessly.

# Download and install EasyN P App

1

Search for the easyn p App on the App Store (Apple) or Google play store (Android) and install it.

---

## 2 Add camera

### ① Add camera
