WARNING: To take full advantage of your Bluetooth devices and ensure maximum performance and reliability, please follow these simple steps:

1. Ensure that your Bluetooth device is properly paired with your mobile phone.

2. Pair your mobile phone with the Bluetooth device. This ensures that it can communicate effectively.

3. Keep your Bluetooth device within range of your mobile phone to maintain a strong connection.

4. Always update your device's firmware to the latest version to optimize performance.

5. Avoid using your mobile phone while driving. This ensures the safety of yourself and others.

6. Power On/Off

7. Function Set

8. Power On/Off

Please note that your mobile phone supports a range of Bluetooth devices, including耳机 (headphones), car kits, and other compatible accessories. For more information, please refer to your device's user manual.
1. Insert the end of the phone cord into the phone jack.
2. Insert the plug of the power cord into the phone plug. Then insert the other end of the power cord into the electrical outlet.
3. Lift the handset to hear dial tone. If necessary, adjust the volume for the ringer sound.
4. When you are ready to begin a call, you can press the dial key on the telephone to hear the dial tone. You can then enter the number you wish to call. To complete the call, you can press the end key to hang up.
5. To end the call, press the end key.

1.3 Making Calls By Speed Dailing

1. Insert the end of the phone cord into the phone jack.
2. Insert the plug of the power cord into the phone plug. Then insert the other end of the power cord into the electrical outlet.
3. Lift the handset to hear dial tone. If necessary, adjust the volume for the ringer sound.
4. When you are ready to begin a call, you can press the dial key on the telephone to hear the dial tone. You can then enter the number you wish to call. To complete the call, you can press the end key to hang up.
5. To end the call, press the end key.

1.4 Making Calls By Recent Number

1.4.1 Recording the Last Number

If you want to make a call, you can press the dial key on the telephone to hear the dial tone. You can then enter the number you wish to call. To complete the call, you can press the end key to hang up.
5. To end the call, press the end key.

1.4.2 Making Calls By Recent Number

1. Insert the end of the phone cord into the phone jack.
2. Insert the plug of the power cord into the phone plug. Then insert the other end of the power cord into the electrical outlet.
3. Lift the handset to hear dial tone. If necessary, adjust the volume for the ringer sound.
4. When you are ready to begin a call, you can press the dial key on the telephone to hear the dial tone. You can then enter the number you wish to call. To complete the call, you can press the end key to hang up.
5. To end the call, press the end key.

1.4.3 Making Calls By Recent Number

1. Insert the end of the phone cord into the phone jack.
2. Insert the plug of the power cord into the phone plug. Then insert the other end of the power cord into the electrical outlet.
3. Lift the handset to hear dial tone. If necessary, adjust the volume for the ringer sound.
4. When you are ready to begin a call, you can press the dial key on the telephone to hear the dial tone. You can then enter the number you wish to call. To complete the call, you can press the end key to hang up.
5. To end the call, press the end key.

1.4.4 Making Calls By Recent Number

1. Insert the end of the phone cord into the phone jack.
2. Insert the plug of the power cord into the phone plug. Then insert the other end of the power cord into the electrical outlet.
3. Lift the handset to hear dial tone. If necessary, adjust the volume for the ringer sound.
4. When you are ready to begin a call, you can press the dial key on the telephone to hear the dial tone. You can then enter the number you wish to call. To complete the call, you can press the end key to hang up.
5. To end the call, press the end key.
You can connect the phone tree network via the phone line.

You can add the phone tree network via the phone line.

1. Connect the phone tree network via the phone line.
2. Add the phone tree network via the phone line.

You can connect the phone tree network via the phone line.

You can add the phone tree network via the phone line.

1. Connect the phone tree network via the phone line.
2. Add the phone tree network via the phone line.
Step 1: Press the number of the message you want to delete.

Step 2: Press the delete button or the button marked with an "X".

Step 3: Press the send button or the button marked with a checkmark.

Step 4: You will receive a confirmation message.

NOTE: Each message has a unique ID number that is displayed on the screen. If you make a mistake, you can press the backspace button to delete the ID number and then try again.

To delete multiple messages at once, follow these steps:

1. Press the delete button for each message you want to delete.
2. Press the send button to confirm the deletion.
3. You will receive a confirmation message for each message that was deleted.

CAUTION: Deleting messages is permanent and cannot be undone. If you delete a message by mistake, you cannot retrieve it.
The network service can request the incoming call to another phone number set by the user.

- Contact the operator to request call divert.
- Ensure that the number to which calls will be diverted is correct.
- Ensure that the operator knows the new number.
- Confirm the new number with the operator before proceeding.
- Once the service is activated, incoming calls will be redirected to the new number.
This is used to protect the network settings and the password. Press the function key to
access the function settings.

Function settings:
- Local Password:
  - Type the local password and press Enter.
- Primary Password:
  - Type the primary password and press Enter.
- Secondary Password:
  - Type the secondary password and press Enter.

If you want to disable the function, you can press the function key to enter the
function settings and disable the function.

1. Secure Settings
   - Disable Secure Settings.
2. Function Disable
   - Disable Function.
3. Function List
   - Show Function List.

If you want to enable the function, you can press the function key to enter the
function settings and enable the function.

4. Secure Settings
   - Enable Secure Settings.
5. Function Enable
   - Enable Function.
6. Function List
   - Show Function List.

If you want to lock the function settings, you can press the lock key to lock the
function settings.

7. Lock Settings
   - Lock Settings.
8. Unlock Settings
   - Unlock Settings.

If you want to unlock the function settings, you can press the unlock key to unlock the
function settings.

9. Unlock Settings
   - Unlock Settings.
10. Reset Settings
    - Reset Settings.
