Installing the Battery
Chapter 3: Getting Started

The Wi-Fi Phone requires a wireless connection to a Wi-Fi access point to operate. In addition, the access point network must provide access to the Internet to make Skype calls.

You can set the phone to connect to specific wireless networks or search for “open” networks. Wireless network information is stored in the phone’s memory as “Preferred Networks” that are searched for each time the phone is powered on.

When powering on the Wi-Fi Phone for the first time, there are no Preferred Networks in the phone’s memory. You need to select a wireless network and sign into your Skype account before you can start making calls.

First-Time Startup

When the Wi-Fi Phone is used for the first time, follow these steps to set up the phone and make a network connection:

1. Select the language of the display. The default is English.

2. Read and accept the Skype Agreement statement.
   “No Emergency Calls. Skype is not a replacement for your ordinary telephone and cannot be used for emergency calling.
   I have read and accept the Skype's terms and conditions at www.skype.com/eula and www.skype.com/tos and in my device user guide.”
   See Appendix B for the full text of the Skype Agreement.
   You must accept the Agreement to use the phone. Press the Left Soft Key to accept the Agreement.
Getting Started

3. The phone scans for nearby wireless networks and lists those that it finds.

Normally, you need to be within 90 m (300 ft) of a network’s wireless access point to be able to connect to it. If the network you want to connect to is not on the list, move to another location and try again.

4. From the wireless networks list, select the wireless network that you want to connect to and press the Left Soft Key to access Options menu. Then select “Connect.”

If a security key is required, the phone prompts for the key value. Security keys should be provided by the wireless network operator.

The access point information is stored in the phone’s memory as a “Preferred Network” and will be used next time the phone is powered on.

5. If you already have a Skype account, sign in with your user name and password.

Note: If you are already signed into your Skype account from your PC, you should sign out first before using the phone. You cannot sign into your Skype account from two devices at the same time.

You can also create a new account using the phone. See “Creating a New Skype Account” on page 3-7.

When your Skype login is successful, you can start making calls. Your current Contacts should display in the Contacts screen.

Your Skype Contacts display all the names you can make calls to. If you are new to Skype and have just created a new account, your Contacts will be empty. You need to find the names of users and add them to your list.

Skype protects the privacy of users by requiring contact details that are added to Contacts. When you want to add a contact to your list, a contact details request is sent to the user. The user can accept or deny the request. When a request is accepted, you can see when the contact is online and make calls to them. You can also view their personal profile details.

Skype allows you to also block Contacts that you have previously shared details with. When you block a contact, you will always appear offline to them and they will not be able to call you.

Skype functions on most networks without any special settings required. However, some networks use restrictive firewalls that tightly control incoming and outgoing Internet traffic, which prevents Skype from functioning properly. If you find that your Wi-Fi Phone does not function from the network you are using, ask the network operator or system administrator for the settings required to enable Skype to function properly.

The Advanced option on the Settings menu provides access to the network connection settings that may be required for some networks. If you are not familiar with firewalls and networking terms, it may be best to ask a system administrator or knowledgeable friend to help make the settings for you.

**Note:** This section only provides a brief summary of the advanced settings available and a knowledge of networking is assumed. For more information, go to www.skype.com.

To access the phone's advanced settings, follow these steps:

1. Press the Left Soft Key to select the menu and then use the Navigation key to scroll down and select “Settings.”
