**Operation Instruction:**

1. **Arming the audio and shock alarm:**
   Stop the motorcycle, then press button 1, it is now in an audio and shock armed status. Whenever the motorcycle is touched, the alarm siren will sound and the indicator light flashes slowly. If it is shaken again within 15 seconds, the alarm siren will sound constantly, and the indicator light flashes. In the meantime, the engine is immobilized and motorcycle cannot be driven.

2. **Set up the mute alarm:**
   Press the button 2, it is now in a mute armed status. The siren does not sound when the motorcycle is shaken for the first time and the indicator light flashes slowly. The mute mode will be switched off automatically when it is shaken again. Press button 1 to exit the mute setup, and enter into the audio and shock armed status.

3. **Engine immobilization:**
   After setting the alarm, if the motorcycle is started forcibly the siren will sound constantly and the indicator light flashes constantly, the engine is locked and motorcycle cannot be started up.

4. **Disarming the alarm:**
   Press button 3 to disarm in armed status. To stop the alarm press button 3 in alarming status.

5. **Locating the motorcycle by the audio and indicators:**
   Pressing the button 4 for a long time, the audio and indicators will show out the parking position. It is soundless when the system is in mute armed status but the indicators will flash; release the button to stop locating.

6. **Remote startup:**
   The motorcycle starts up by pressing the button 4 twice continuously (within two seconds) and used for the non-key driving and warm-up. Repeat the above operation if the startup is not successful.

7. **Anti-hijacking:**
   In the event of a hijack attempt by a robber, press button 3 in this emergency, the motorcycle engine will stop automatically, and the siren sounds, the indicator light flashes. In the meantime, the engine is immobilized and cannot re-start.

8. **Secured Overtaking:**
   Press button 2 when driving, the siren will sound continuously and the indicators flash, it is the overtaking signal.

9. **Remote cutout (flammable):**
   The engine will stop immediately by pressing the button 3 when the motorcycle engine is running.

10. **Status memory:**
    When the motorcycle is set into mute armed status, press the button 3, the siren sounds, it means that the motorcycle has been moved/shaken.

11. **Sensitivity adjustment:**
    Press the button 4 and the button 2 at the same time, the siren will sound three times and the indicator light flashes three times, then goes into the sensitivity adjustment status. The sensitivity level will go higher when you press the button 4, and go down when you press the button 3. The times of the siren sounding shows the sensitivity levels, there are totally four sensitivity levels. Quit from the sensitivity adjustment status by pressing the button 4.

**Note:**
1. When using the remote startup system, the starter button of the motorcycle cannot be pressed at the same time, otherwise the fuse will blow out.
2. Some of the function will be affected if the voltage of the battery is too low, and the battery needs to be re-charged.
3. If a short circuit is detected, please check the battery of the remote transmitter and make sure the battery polarity is correct.

When parking, please adjust the sensitivity to a proper level according to the surrounding environment in case the alarms sound affects others.
