Overview of Bluetooth Phone Adapter
The Bluetooth phone adapter connects to your traditional non-Bluetooth telephone line and allows you to answer PSTN calls using your remote Bluetooth device (Bluetooth headset). Moreover, it enables you to answer VoIP calls by partnering your Bluetooth headset. You can enjoy the comfort and convenience of hands-free communication.

Packing List
- Bluetooth phone adapter
- Extension cord
- Audio connector
- Power adapter
- User manual

Features

1. LED indicator
2. Seven-segment LED display
3. Pair button
4. Enter button
5. Ringer (ON/OFF) switch
6. Reset button
7. Mini USB DC jack
8. LINE jack
9. TELEPHONE jack
10. LINE IN jack
11. Audio connector
5. Press the Pair button 6 times until the display shows 6. (10 for 1.0).
6. Press the Enter button and thereafter the display shows 0.
3. Press the Pair button 5 times until the display shows 5. (5 for 1).
2. Press the Pair and Enter buttons together. The segmented LED display shows 0. (All).
1. Pair your Bluetooth headset on your phone.

If the PIN of your Bluetooth headset is one of the four defined, please refer to its user guide.

**Note:** If your Bluetooth headset does not have a display, refer to its user guide.

**Note:** Bluetooth is a technology that allows devices to communicate over short distances. It is often used for wireless communication between devices such as smartphones, computers, and speakers.

**Note:** Bluetooth is a low energy technology, which means it uses very little power. This makes it ideal for use in devices such as smartphones and tablets.

**Note:** Bluetooth is a versatile technology that can be used for a wide range of applications, including music streaming, data transfer, and remote control.

---

**Getting Started:**

1. Connect the power adapter to the mini USB DC jack.
2. Connect the power cord to the power adapter.
3. Connect the power adapter to a wall outlet (wall).
6. Press the “Enter” button and thereafter the display shows “0” again.
7. Press the “Pair” button 7 times until the display shows “7” (“7” for the “5678”).
8. Press the “Enter” button and thereafter the display shows “0” again.
9. Press the “Pair” button 8 times until the display shows “8” (“8” for the “5678”).
10. Press the “Enter” button and the phone adapter attempts to pair and connect with your Bluetooth headset having a PIN of “5678”. When the two devices are successfully connected, the LED indicator on the phone adapter will flash twice every one second.

Using the phone adapter for PSTN calls
Once the phone adapter is connected to your Bluetooth headset, you can use the Bluetooth headset by pressing its Talk button to receive or end a PSTN call.

Note: 1. You can also use your telephone to receive and answer PSTN calls as usual.
2. You may adjust the “Ringer” switch to let the phone adapter ring or not according to your interest.

Using the phone adapter for VoIP calls
The phone adapter provides a standard “LINE IN” jack for connecting with a PC. You may talk with your friends on the Skype (or other IMs such as MSN Message, Yahoo Message, AOL Message) via your Bluetooth headset connected with the phone adapter.
To use the phone adapter for VoIP calls, do the following:

1. Verify your Bluetooth headset is connected with the phone adapter.
2. Switch the connection of the phone adapter from the PSTN to your PC.
   a. Press the TALK button on the headset once.
      You will hear a dial tone, and the LED indicator of the phone adapter is on.
   b. Press the TALK button on the headset a second time to hang up.
      The LED indicator of the phone adapter flashes twice every three seconds.
   c. Press the TALK button of headset a three time.
      The LED indicator of the phone adapter is on again, and the audio signal is connected between the phone adapter and your PC sound card. Now you can use the Skype as usual.

Note: If you wish to switch the connection of phone adapter from your PC to the PSTN, press the Talk button on the headset to suspend the PC sound and do from step 1 on.

Paired link to additional devices

Your phone adapter can store pairing information for up to eight different headsets equipped with Bluetooth wireless technology. If you want to pair the phone adapter and more than one headset, please follow the pairing process to pair them one by one. Headset information is stored in a "Paired Device List" in memory in chronological order. When an attempt to pair with more than eight headsets is made, the oldest paired headset will be removed from the list.

Any of the eight paired headsets can initiate a paired connection to the phone adapter while the phone adapter is in the idle mode. The phone adapter will automatically initiate a paired connection (when powered on) with the last headset it was connected to. When there is an incoming call, the phone adapter can also connect the latest connected headset automatically while the phone adapter is in the idle mode.

Note: In case the connection is lost, you can manually connect the phone adapter to the headset by pressing the Enter button.
