- 1) Under any mode, press power on/off button for some seconds, red light and yellow light will flash together six times then turn off together, indicates it is power off.
- 2) Press power on/off button and Function Button at the same time, then all the lights are off, indicating it is power off.

◆ **Reset**

Under incorrect operation or a certain reason, the device may stop working, at this time, Press power on/off button and Function Button at the same time, then the device is power off.

◆ **Charging**

Connect the device to computer via USB cable under power off mode, the yellow light of the camera keeps on and red light flashes while being charged. When it is fully charged, the yellow light is on and the red light is off.

Attention: if device is lack of electricity while recording, the green light flashes slowly, the video file will be saved before the device turns off automatically.

◆ **Playback**

Connect the camera to computer via USB cable and play back video on computer. Please make sure there is playback software in the computer before connecting.

◆ **Setting time**

When there is video playback, device will show the recording time on the down right corner of video. Please set time as follow:

- 1) Insert the user manual CD into the computer
- 2) Open the file: update time tool V2.0
- 3) Click the file, then the time of the Clock camera will be synchronous as the time of computer
- 4) If you want to change the time, just adjust the time of computer

◆ Use as a Web Camera

- 1) Under standby mode, connect the camera with computer via USB cable.
- 2) Before use the Webcam, please install a driver named "STK02N 2.4.exe" in the user manual CD, follow the setup wizard to complete installation .
- 3) A standard video equipment will appear in the screen, and then the device can be used as a webcam.
- 4) As this driver cannot be uninstalled automatically, so when installing this driver for even number, the system will uninstall the drive, and delete some files, which lead to webcam function fails. At this time just install the driver once again, it will be normal again.

● Attention

- 1) When there is not enough power while recording, yellow light flashes quickly, the current video file will be saved automatically then power off.
- 2) When there is not enough memory left, yellow light flashes quickly, seconds later, the current video file will be saved automatically.
- 3) When taking video continually, the system will automatically generate a new video file after each operation.
- 4) To save the video recorded safe, the camera saves video files every 30 minutes, then it continues to record next videos.
- 5) Under a bright environment, keep camera vertical, stable and keep certain distance from the scene you want to record in order to achieve a best effect .
- 6) Connect to computer: the time for computer with different system or configuration to identify the hardware is slightly different. During this period, please wait for a moment. If computer can't identify, please make sure your operating system, drivers and USB interface cable in good work order, then connect again.
